1.2	Running tests	3
1.3	Writing tests	3
1.4	Building documentation	3
2	argparse2 — Summary of changes	5
2.1	Next version (TBD)	5
2.2	0.1.0	5
3	Indices and tables	7

argparse2 is a Python library that is a fork of the the Python standard library's [argparse](#) module. The [project page](#) is on [GitHub](#).

argparse2 is distributed for free on [PyPI](#) and the source code is hosted on [GitHub_](#). Documentation is hosted on [Read the Docs](#).

TODO

Contents:

argparse2 — How to contribute

This page contains information for those contributing to `argparse2`.

1.1 Setting up

To develop locally, clone the repo.

Then run the following from the repo root in a new `virtualenv`:

```
$ pip install -e .[dev,test]
```

1.2 Running tests

To run tests:

```
$ ./tests.sh
```

The test runner allows tests to be run with either `argparse` or `argparse2` as the `argparse` module. This makes it easy to see what test cases the two differ on.

1.3 Writing tests

The repository contains two types of tests: the original unit tests carried over from CPython's `argparse` and new `argparse2`-specific tests.

The original `argparse` tests are in a single file copied from the CPython repository (and modified slightly to support importing `argparse2` instead of `argparse`). New tests should not be added to this file. This simplifies keeping the upstream tests in synch with this project.

1.4 Building documentation

To build and view documentation locally:

```
$ cd docs
$ make html
$ open _build/html/index.html
```

argparse2 — Summary of changes

This page contains a summary of `argparse2` changes.

2.1 Next version (TBD)

- Simplified and refactored some formatting-related code (e.g. parts of the `HelpFormatter` class).
- [CPython issue #14037]: Added an `add_parser_group()` method to let subcommands be organized in groups.

2.2 0.1.0

- Forked the following files from CPython version 3.5.0 alpha 1 on November 27, 2014 (changeset `93622:167d51a54de2` from the [CPython repository](#)):
 - `Lib/argparse.py`
 - `Lib/test_argparse.py`
 - `Doc/library/argparse.rst`

Indices and tables

- `genindex`
- `modindex`
- `search`
