2 Indices and tables
2.1 Special Methods Table .................................................... 7
Note:

Todo: Most of the **boldface** is to be changed to refs or other markup later.
1.1 Compiling from the command line

This section was moved to compiling_command_line.

1.2 Compiling with distutils

This section was moved to basic_setup.py.

1.2.1 Configuring the C-Build

This section was moved to basic_setup.py.

1.2.2 Cythonize arguments

This section was moved to cythonize_arguments.

1.2.3 Compiler options

This section was moved to compiler_options.
1.2.4 Distributing Cython modules
This section was moved to distributing_cython_modules.

1.3 Integrating multiple modules
This section was moved to integrating_multiple_modules.

1.4 Compiling with pyximport
This section was moved to pyximport.

1.4.1 Arguments

1.4.2 Dependency Handling

1.4.3 Limitations

1.5 Compiling with cython_inline
This section was moved to compiling_with_cython_inline.

1.6 Compiling with Sage
This section was moved to compiling_with_sage.

1.7 Compiling with a Jupyter Notebook
This section was moved to compiling_notebook.

1.8 Compiler directives
This section was moved to compiler-directives.

1.8.1 Configurable optimisations
This section was moved to configurable_optimisations.

1.8.2 Warnings
This section was moved to warnings.
1.8.3 How to set directives

This section was moved to how_to_set_directives.

Globally

Locally

In setup.py
2.1 Special Methods Table

You can find an updated version of the special methods table in special_methods_table.

2.1.1 General

2.1.2 Rich comparison operators

2.1.3 Arithmetic operators

2.1.4 Numeric conversions

2.1.5 In-place arithmetic operators

2.1.6 Sequences and mappings

2.1.7 Iterators

2.1.8 Buffer interface

2.1.9 Descriptor objects

- genindex
- modindex
- search
