# DialogC Documentation

*Release 0.1*

**Mat Mathews**

November 30, 2016

<b>1 Markup Syntax</b>	<b>3</b>
1.1 Document Attributes . . . . .	3
1.2 Story Blocks . . . . .	3
<b>2 Compilation and Output</b>	<b>5</b>
<b>3 Indices and tables</b>	<b>7</b>

DialogC is a Game Dialog Markup and Compilation tool. From a single YAML file, dialog and other text elements are output into JSON and Script formats.

---

## Markup Syntax

---

### 1.1 Document Attributes

```
DOCUMENT:
  title: MyGame
  title_description: This is a great game
  copyright: MyGameStudio
```

### 1.2 Story Blocks

A *story block* a unique section of dialog, similar to a class. In fact, a story block becomes a class object within dialog. Story blocks are handled differently depending on the *story\_block\_type*, which can be one more of the follow, *static*, *dynamic*, *log*, *notes*, *spoken*.

A **static** story block is the simplest and can be used to create sequentially oriented dialog and other content.

```
(StoryBlockName static):
  story_line:

    - incoming: The Game says something to the player
      time_delay: 1
      responses:
        - A response a Player can choose
        - A different response a Player can choose

    - incoming: The Game says something to the player a little bit later, in sequence
      time_delay: 1
      responses:
        - A response a Player can choose
        - A different response a Player can choose
```

A **dynamic** story block uses *event\_keys*, to define a branching or more dynamic conversation keyed to an event in the game.

```
(DynamicConversationBlock dynamic):
  keyed_storylines:

    player_did_this:

      response: Player says this
      player_data_threshold: ">0"
```

```
time_delay_secs: 5
dynamic_storyline:
  - time_delay_secs: 5
    incoming: A response to the player
    responses:
      - Player has this option with which to respone.
      - Or maybe the player wants to respond with this option instead.

then_the_player_did_this:

  response: Player says this
  player_data_threshold: ">0"
  time_delay_secs: 5
  dynamic_storyline:
    - time_delay_secs: 5
      incoming: A response to the player
      responses:
        - Player has this option with which to respone.
        - Or maybe the player wants to respond with this option instead.
```

We can create a chunk of dialog that should be spoken and sent to a voice actor by adding the **spoken** story block type to the StoryBlock definition. This will direct dialogc to also output HTML Script if the `-s` option is included on the command line.

```
(CharacterShouldSayThis static log spoken):
  location: INT Laboratory
  description: Character is doing something
  entries:
    - parenthetical: very serious
      dialog: So my name is Character and I'm saying something!
```

---

## Compilation and Output

---

Running dialogc on the YAML file we create JSON and an HTML Script.

```
python dialogc.py -d demo.yaml -o demo.json -v true -s demoscript.html
```

### JSON Output

```
{'dynamic_storyline': [{'dynamic_storyline': [{'incoming': 'A response to the player',
                                             'responses': ['Player has this option with which to re
                                                         'Or maybe the player wants to respond w
                                             'time_delay_secs': 5]],
                    'player_data_threshold': '>0',
                    'response': 'Player says this',
                    'time_delay_secs': 5},
 {'dynamic_storyline': [{'incoming': 'A response to the player',
                                             'responses': ['Player has this option with which to re
                                                         'Or maybe the player wants to respond w
                                             'time_delay_secs': 5]],
                    'player_data_threshold': '>0',
                    'response': 'Player says this',
                    'time_delay_secs': 5}],
 'story_block_name': [{'incoming': 'The Game says something to the player',
                       'responses': ['A response a Player can choose',
                                     'A different response a Player can choose'],
                       'time_delay': 1},
 {'incoming': 'The Game says something to the player a little bit later, in sequ
                       'responses': ['A response a Player can choose',
                                     'A different response a Player can choose'],
                       'time_delay': 1}]]}
```

### Script Output

# MyGame

---

This is a great game

INT LABORATORY

Character is doing something

CHARACTER

*(very serious)*

So my name is Character and I'm saying  
something!

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`
