# **DNSimple API Documentation**

*Release 0.1*

**Jonas Obrist**

May 26, 2014

<b>1</b>	<b>Installation</b>	<b>3</b>
<b>2</b>	<b>Usage</b>	<b>5</b>
<b>3</b>	<b>Indices and tables</b>	<b>7</b>

Contents:

---

## Installation

---

Inside a virtualenv, run `pip install dnsimple-api`.

---

## Usage

---

Get started:

```
from dnsimple.api import DNSimple  
mydns = DNSimple('myusername', 'mypassword')
```

Get a list of your domains:

```
mydns.domains
```

Access a single domain:

```
example = mydns.domains['example.com']
```

Show records of that domain:

```
example.records
```

Add a new record (in this case a subdomain called “test”):

```
example.add_record('test', 'A', '1.2.3.4')
```

---

## Indices and tables

---

- *genindex*
- *modindex*
- *search*
