DNSimple API Documentation

Release 0.1

Jonas Obrist

May 26, 2014

Contents

Contents:

Installation

Inside a virtualenv, run `pip install dnsimple-api`.

Usage

Get started:

```python
from dnsimple.api import DNSimple

mydns = DNSimple('myusername', 'mypassword')
```

Get a list of your domains:

```python
mydns.domains
```

Access a single domain:

```python
example = mydns.domains['example.com']
```

Show records of that domain:

```python
example.records
```

Add a new record (in this case a subdomain called "test"):

```python
example.add_record('test', 'A', '1.2.3.4')
```

Indices and tables

- *genindex*
- *modindex*
- *search*
