CHAPTER 1

Status

`eyeD3` is a Python tool for working with audio files, specifically MP3 files containing ID3 metadata (i.e. song info).

It provides a command-line tool (`eyeD3`) and a Python library (`import eyed3`) that can be used to write your own applications or plugins that are callable from the command-line tool.

For example, to set some song information in an mp3 file called `song.mp3`:

```
$ eyeD3 -a Integrity -A "Humanity Is The Devil" -t "Hollow" -n 2 song.mp3
```

With this command we've set the artist (`-a/--artist`), album (`-A/--album`), title (`-t/--title`), and track number (`-n/--track-num`) properties in the ID3 tag of the file. This is the standard interface that `eyeD3` has always had in the past, therefore it is also the default plugin when no other is specified.

The results of this command can be seen by running the `eyeD3` with no options.

```
$ eyeD3 song.mp3
song.mp3      [ 3.06 MB ]
-----
ID3 v2.4:
title: Hollow
artist: Integrity
album: Humanity Is The Devil
album artist: None
track: 2
-----
```

The same can be accomplished using Python.

```
import eyed3

audiofile = eyed3.load("song.mp3")
audiofile.tag.artist = u"Integrity"
audiofile.tag.album = u"Humanity Is The Devil"
audiofile.tag.album_artist = u"Integrity"
audiofile.tag.title = u"Hollow"
audiofile.tag.track_num = 2
```

```
audiofile.tag.save()
```

eyeD3 is written and maintained by [Travis Shirk](#) and is licensed under version 3 of the [GPL](#).

CHAPTER 3

Features

- Python package for writing application and/or plugins.
- Command-line tool driver script that supports plugins. viewer/editor interface.
- Easy editing/viewing of audio metadata from the command-line, using the 'classic' plugin.
- Support for ID3 versions 1.x, 2.2 (read-only), 2.3, and 2.4.
- Support for the MP3 audio format exposing details such as play time, bit rate, sampling frequency, etc.
- Abstract design allowing future support for different audio formats and metadata containers.

Python 2.7, >= 3.3 is required.

For installation instructions or more complete documentation see <http://eyeD3.nicfit.net/>

Please post feedback and/or defects on the [issue tracker](#), or [mailing list](#).

4.1 Installation

Stable releases of eyeD3 are best installed via `pip` or `easy_install`; or you may download TGZ or ZIP source archives from a couple of official locations. Detailed instructions and links may be found on the *Installation* page.

Otherwise, if you want to live on the edge, you can pull down the source code from the Mercurial repository at [GitHub](#). The *Installation* page has details for how to access the source code.

4.1.1 Installation

Easy Installation

Install using 'pip'

pip is a tool for installing Python packages from [Python Package Index](#) and is a replacement for *easy_install*. It will install the package using the first 'python' in your path so it is especially useful when used along with [virtualenv](#), otherwise root access may be required.

```
$ pip install eyeD3
# Optional: To install the ultra powerful Display plugin (-P display)
$ pip install eyeD3[display-plugin]
```

Dependencies

eyeD3 0.8.1 has been tested with Python 2.7, >=3.3 (see the 0.7.x series for Python 2.6 support).

The primary interface for building and installing is `Setuptools`. For example, `python setup.py install`.

Development Dependencies

If you are interested in doing development work on eyeD3 (or even just running the test suite), you may also need to install some additional packages:

```
$ pip install -r requirements/test.txt $ pip install -r requirements/dev.txt
```

Download Source Archive

Source packages are available from the [release archive](#) in tar.gz and zip formats. After un-archiving the distribution file you can install in the common manner:

```
$ tar xzf eyeD3-X.Y.Z.tar.gz
$ cd eyeD3-X.Y.Z
# This may require root access
$ python setup.py install
```

Or you can run from the archive directory directly:

```
$ tar xzf eyeD3-X.Y.Z.tar.gz
$ cd eyeD3-X.Y.Z
$ python setup.py build
$ export PYTHONPATH=`pwd`/build/lib
$ export PATH=${PATH}:`pwd`/bin
```

Checking Out the Source Code

```
$ git clone https://github.com/nicfit/eyeD3.git
```

Note: When submitting patches please base them on the ‘master’ branch.

4.2 Documentation

4.2.1 ‘eyeD3’ Command Line Tool

The eyeD3 command line interface is based on plugins. The main driver knows how to traverse file systems and load audio files for hand-off to the plugin to do something interesting. With no plugin selected a simplified usage is:

```
$ eyeD3 --help
usage: eyeD3 [-h] [--version] [--exclude PATTERN]
            [--plugins] [--plugin NAME]
            [PATH [PATH ...]]
```

```
positional arguments:
  PATH                Files or directory paths

optional arguments:
  -h, --help          show this help message and exit
  --version           Display version information and exit
  --exclude PATTERN  A regular expression for path exclusion. May be
                    specified multiple times.
  --plugins          List all available plugins
  --plugin NAME      Specify which plugin to use.
```

The `PATH` argument(s) along with optional usage of `--exclude` are used to tell eyeD3 what files or directories to process. Directories are searched recursively and every file encountered is passed to the plugin until no more files are found.

To list the available plugins use the `--plugins` option and to select a plugin pass its name using `--plugin=<name>`.

If no `--plugin=` option is provided the *default* plugin is selected. Currently this is set to be the command line tag viewer/editor that has been the primary interface in all versions of eyeD3 prior to 0.7.x.

Plugins

classic - Tag Viewer/Editor

Classic eyeD3 interface for viewing and editing tags.

Names

classic

Description

All `PATH` arguments are parsed and displayed. Directory paths are searched recursively. Any editing options (`-artist`, `-title`) are applied to each file read.

All date options (`-Y`, `-release-year` excepted) follow ISO 8601 format. This is `yyyy-mm-ddThh:mm:ss`. The year is required, and each component thereafter is optional. For example, 2012-03 is valid, 2012-12 is not.

Options

```
-a STRING, --artist STRING
                    Set the artist name.
-A STRING, --album STRING
                    Set the album name.
-b STRING, --album-artist STRING
                    Set the album artist name. 'Various Artists', for
                    example. Another example is collaborations when the
                    track artist might be 'Eminem featuring Proof' the
                    album artist would be 'Eminem'.
-t STRING, --title STRING
                    Set the track title.
```

```

-n NUM, --track NUM    Set the track number. Use 0 to clear.
-N NUM, --track-total NUM
                        Set total number of tracks. Use 0 to clear.
--track-offset N      Increment/decrement the track number by [-]N. This
                        option is applied after --track=N is set.
-d NUM, --disc-num NUM
                        Set the disc number. Use 0 to clear.
-D NUM, --disc-total NUM
                        Set total number of discs in set. Use 0 to clear.
-G GENRE, --genre GENRE
                        Set the genre. If the argument is a standard ID3 genre
                        name or number both will be set. Otherwise, any string
                        can be used. Run 'eyeD3 --plugin=genres' for a list of
                        standard ID3 genre names/ids.
--non-std-genres      Disables certain ID3 genre standards, such as the
                        mapping of numeric value to genre names.
-Y YEAR, --release-year YEAR
                        Set the year the track was released. Use the date
                        options for more precise values or dates other than
                        release.
-c STRING, --comment STRING
                        Set a comment. In ID3 tags this is the comment with an
                        empty description. See --add-comment to add multiple
                        comment frames.
--rename PATTERN      Rename file (the extension is not affected) based on
                        data in the tag using substitution variables: $album,
                        $album_artist, $artist, $best_date,
                        $best_date:prefer_recording,
                        $best_date:prefer_recording:year,
                        $best_date:prefer_release,
                        $best_date:prefer_release:year, $best_date:year,
                        $disc:num, $disc:total, $file, $file:ext,
                        $original_release_date, $original_release_date:year,
                        $recording_date, $recording_date:year, $release_date,
                        $release_date:year, $title, $track:num, $track:total

ID3 options:
-1, --v1              Only read and write ID3 v1.x tags. By default, v1.x
                        tags are only read or written if there is not a v2 tag
                        in the file.
-2, --v2              Only read/write ID3 v2.x tags. This is the default
                        unless the file only contains a v1 tag.
--to-v1.1             Convert the file's tag to ID3 v1.1 (Or 1.0 if there is
                        no track number)
--to-v2.3             Convert the file's tag to ID3 v2.3
--to-v2.4             Convert the file's tag to ID3 v2.4
--release-date DATE   Set the date the track/album was released
--orig-release-date DATE
                        Set the original date the track/album was released
--recording-date DATE
                        Set the date the track/album was recorded
--encoding-date DATE  Set the date the file was encoded
--tagging-date DATE   Set the date the file was tagged
--publisher STRING    Set the publisher/label name
--play-count <+>N    Set the number of times played counter. If the
                        argument value begins with '+' the tag's play count is
                        incremented by N, otherwise the value is set to
                        exactly N.

```

```

--bpm N          Set the beats per minute value.
--unique-file-id OWNER_ID:ID
                Add a unique file ID frame. If the ID arg is empty the
                frame is removed. An OWNER_ID is required. The ID may
                be no more than 64 bytes.
--add-comment COMMENT[:DESCRIPTION[:LANG]]
                Add or replace a comment. There may be more than one
                comment in a tag, as long as the DESCRIPTION and LANG
                values are unique. The default DESCRIPTION is '' and
                the default language code is 'eng'.
--remove-comment DESCRIPTION[:LANG]
                Remove comment matching DESCRIPTION and LANG. The
                default language code is 'eng'.
--remove-all-comments
                Remove all comments from the tag.
--add-lyrics LYRICS_FILE[:DESCRIPTION[:LANG]]
                Add or replace a lyrics. There may be more than one
                set of lyrics in a tag, as long as the DESCRIPTION and
                LANG values are unique. The default DESCRIPTION is ''
                and the default language code is 'eng'.
--remove-lyrics DESCRIPTION[:LANG]
                Remove lyrics matching DESCRIPTION and LANG. The
                default language code is 'eng'.
--remove-all-lyrics
                Remove all lyrics from the tag.
--text-frame FID:TEXT
                Set the value of a text frame. To remove the frame,
                specify an empty value. For example, --text-
                frame='TDRC:'
--user-text-frame DESC:TEXT
                Set the value of a user text frame (i.e., TXXX). To
                remove the frame, specify an empty value. e.g.,
                --user-text-frame='SomeDesc:'
--url-frame FID:URL
                Set the value of a URL frame. To remove the frame,
                specify an empty value. e.g., --url-frame='WCOM:'
--user-url-frame DESCRIPTION:URL
                Set the value of a user URL frame (i.e., WXXX). To
                remove the frame, specify an empty value. e.g.,
                --user-url-frame='SomeDesc:'
--add-image IMG_PATH:TYPE[:DESCRIPTION]
                Add or replace an image. There may be more than one
                image in a tag, as long as the DESCRIPTION values are
                unique. The default DESCRIPTION is ''. If PATH begins
                with 'http[s]://' then it is interpreted as a URL
                instead of a file containing image data. The TYPE must
                be one of the following: OTHER, ICON, OTHER_ICON,
                FRONT_COVER, BACK_COVER, LEAFLET, MEDIA, LEAD_ARTIST,
                ARTIST, CONDUCTOR, BAND, COMPOSER, LYRICIST,
                RECORDING_LOCATION, DURING_RECORDING,
                DURING_PERFORMANCE, VIDEO, BRIGHT_COLORED_FISH,
                ILLUSTRATION, BAND_LOGO, PUBLISHER_LOGO.
--remove-image DESCRIPTION
                Remove image matching DESCRIPTION.
--remove-all-images
                Remove all images from the tag
--write-images DIR
                Causes all attached images (APIC frames) to be written
                to the specified directory.
--add-object OBJ_PATH:MIME-TYPE[:DESCRIPTION[:FILENAME]]
                Add or replace an object. There may be more than one
                object in a tag, as long as the DESCRIPTION values are

```

```

        unique. The default DESCRIPTION is ''.
--remove-object DESCRIPTION
        Remove object matching DESCRIPTION.
--write-objects DIR
        Causes all attached objects (GEOB frames) to be
        written to the specified directory.
--remove-all-objects
        Remove all objects from the tag
--add-popularity EMAIL:RATING[:PLAY_COUNT]
        Adds a popularity metric. There may be multiples
        popularity values, but each must have a unique email
        address component. The rating is a number between 0
        (worst) and 255 (best). The play count is optional,
        and defaults to 0, since there is already a dedicated
        play count frame.
--remove-popularity EMAIL
        Removes the popularity frame with the specified email
        key.
--remove-v1
        Remove ID3 v1.x tag.
--remove-v2
        Remove ID3 v2.x tag.
--remove-all
        Remove ID3 v1.x and v2.x tags.
--remove-frame FID
        Remove all frames with the given ID. This option may
        be specified multiple times.
--max-padding NUM_BYTES
        Shrink file if tag padding (unused space) exceeds the
        given number of bytes. (Useful e.g. after removal of
        large cover art.) Default is 64 KiB, file will be
        rewritten with default padding (1 KiB) or max padding,
        whichever is smaller.
--no-max-padding
        Disable --max-padding altogether.
--encoding latin1|utf8|utf16|utf16-be
        Set the encoding that is used for all text frames.
        This option is only applied if the tag is updated as
        the result of an edit option (e.g. --artist, --title,
        etc.) or --force-update is specified.

Misc options:
--force-update
        Rewrite the tag despite there being no edit options.
-v, --verbose
        Show all available tag data
--preserve-file-times
        When writing, do not update file modification times.

```

Examples

eyeD3 can do more than edit existing tags, it can also create new tags from nothing. For these examples we'll make a dummy file to work with.

```

$ rm -f example.id3
$ touch example.id3
$ ls -o example.id3

-rw-r--r-- 1 travis 0 Feb 26 17:14 example.id3

```

Now let's set some common attributes like artist and title.

Most options have a shorter name that can be used to save typing. Let's add the album name (-A), the genre (-G), and the year (-Y) the record was released.

Notice how the genre displayed as "Hardcore (id 129)" in the above tag listing. This happens because the genre is a

recognized value as defined by the ID3 v1 standard. eyeD3 used to be very strict about genres, but no longer. You can store any value you'd like. For a list of recognized genres and their respective IDs see the [genres plugin](#).

By default writes ID3 v2.4 tags. This is the latest standard and supports UTF-8 which is a very nice thing. Some players are not caught up with the latest standards (iTunes, pfft) so it may be necessary to convert amongst the various versions. In some cases this can be a lossy operation if a certain data field is not supported, but eyeD3 does its best to convert when the data whenever possible.

```
# Convert the current v2.4 frame to v2.3
$ eyeD3 --to-v2.3 example.id3 -Q

/home/travis/devel/eyeD3/git/example.id3          [ 0.00 Bytes ]
-----
ID3 v2.4: 0 frames
Writing ID3 version v2.3
-----

# Convert back
$ eyeD3 --to-v2.4 example.id3 -Q

/home/travis/devel/eyeD3/git/example.id3          [ 266.00 Bytes ]
-----
ID3 v2.3: 0 frames
Writing ID3 version v2.4
-----

# Convert to v1, this will lose all the more advanced data members ID3 v2 offers
$ eyeD3 --to-v1.1 example.id3 -Q

/home/travis/devel/eyeD3/git/example.id3          [ 266.00 Bytes ]
-----
ID3 v2.4: 0 frames
Writing ID3 version v1.1
-----
```

The last conversion above converted to v1.1, or so the output says. The final listing shows that the tag is version 2.4. This is because tags can contain both versions at once and eyeD3 will always show/load v2 tags first. To select the version 1 tag use the `-1` option. Also note how the the non-standard genre was lost by the conversion, thankfully it is still in the v2 tag.

```
$ eyeD3 -1 example.id3

/home/travis/devel/eyeD3/git/example.id3          [ 394.00 Bytes ]
-----
ID3 v1.0:
title:
artist:
album:
album artist: None
track:          genre: Other (id 12)
-----
```

The `-1` and `-2` options also determine which tag will be edited, or even which tag will be converted when one of the conversion options is passed.

```
# Set an artist value in the ID3 v1 tag
$ eyeD3 -1 example.id3 -a id3v1
```

```
/home/travis/devel/eyeD3/git/example.id3 [ 394.00 Bytes ]
-----
Setting artist: id3v1
ID3 v1.0:
title:
artist: id3v1
album:
album artist: None
track:          genre: Other (id 12)
Writing ID3 version v1.0
-----

# The file now has a v1 and v2 tag, change the v2 artist
$ eyeD3 -2 example.id3 -a id3v2

/home/travis/devel/eyeD3/git/example.id3 [ 394.00 Bytes ]
-----
Setting artist: id3v2
ID3 v2.4:
title:
artist: id3v2
album:
album artist: None
track:
Writing ID3 version v2.4
-----

# Take all the values from v2.4 tag (the default) and set them in the v1 tag.
$ eyeD3 -2 --to-v1.1 example.id3

/home/travis/devel/eyeD3/git/example.id3 [ 394.00 Bytes ]
-----
ID3 v2.4:
title:
artist: id3v2
album:
album artist: None
track:
Writing ID3 version v1.1
-----

# Take all the values from v1 tag and convert to ID3 v2.3
$ eyeD3 -1 --to-v2.3 example.id3

/home/travis/devel/eyeD3/git/example.id3 [ 394.00 Bytes ]
-----
ID3 v1.0:
title:
artist: id3v2
album:
album artist: None
track:          genre: Other (id 12)
Writing ID3 version v2.3
-----
```

At this point the tag is all messed up with by these experiments, you can always remove the tags to start again.

```
$ eyeD3 --remove-all example.id3

/home/travis/devel/eyeD3/git/example.id3           [ 394.00 Bytes ]
-----
Removing ID3 v1.x and/or v2.x tag: SUCCESS
No ID3 v1.x/v2.x tag found!
```

Complex Options

Some of the command line options contain multiple pieces of information in a single value. Take for example the `--add-image` option:

```
--add-image IMG_PATH:TYPE[:DESCRIPTION]
```

This option has 3 pieces of information where one (DESCRIPTION) is optional (denoted by the square brackets). Each individual value is separated by a ':' like so:

```
$ eyeD3 --add-image cover.png:FRONT_COVER
```

This will load the image data from `cover.png` and store it in the tag with the type value for `FRONT_COVER` images. The list of valid image types are listed in the `--help` usage information which also states that the `IMG_PATH` value may be a URL so that the image data does not have to be stored in the the tag itself. Let's try that now.

```
$ eyeD3 --add-image http://example.com/cover.jpg:FRONT_COVER
eyeD3: error: argument --add-image: invalid ImageArg value: 'http://example.com/cover.
↪jpg:FRONT_COVER'
```

The problem is the ':' character in the the URL, it confuses the format description of the option value. To solve this escape all delimiter characters in option values with '\'

```
$ eyeD3 --add-image http\\://example.com/cover.jpg:FRONT_COVER example.id3

/home/travis/devel/eyeD3/git/example.id3           [ 0.00 Bytes ]
-----
Adding image http://example.com/cover.jpg
ID3 v2.4:
title:
artist:
album:
album artist: None
track:
FRONT_COVER Image: [Type: -->] [URL: b'http://example.com/cover.jpg']
Description:

Writing ID3 version v2.4
-----
```

display - Display tag information by pattern

Prints specific tag information which are specified by a pattern.

Names

display

Description

Displays tag information for each file. With a pattern the concrete output can be specified.

The pattern EBNF:

```
pattern    := { <text> | tag | function }*
tag        := '%' <name> { ',' parameter }* '%'
function   := '$' <name> '(' [ parameter { ',' parameter }* ] ')'
parameter  := [ <name> '=' ] [ pattern ]
<text>     := string with escaped special characters
<name>     := string without special characters
```

Tags are surrounded by two '%'. There are also functions that starts with a '\$'. Both tag and function could be parametrized.

Options

```
--pattern-help      Detailed pattern help
-p STRING, --pattern STRING
                    Pattern string
-f FILE, --pattern-file FILE
                    Pattern file
--no-newline        Print no newline after each output
```

Pattern elements

ID3 Tags:

```
a, artist          Artist
A, album           Album
b, album-artist    Album artist
t, title           Title
n, track           Track number
N, track-total     Total track number
d, disc, disc-num  Disc number
D, disc-total      Total disc number

Functions:

```

format                          Formats text bold and colored (grey, red, green, yellow, blue,
↪ magenta,
                                cyan or white)
                                Parameters:
                                text
                                bold (optional)
                                color (optional)
num, number-format              Appends leading zeros
                                Parameters:
                                number
                                digits
filename, fn                     File name
                                Parameter:
                                basename (optional)
filesize                        Size of file
tag-version                      Tag version
length                          Length of aufile file
mpeg-version                     MPEG version (with output placeholders #v as version & #l as
↪ layer)
                                Parameter:
                                output (optional, default='MPEG#v\, Layer #l')
bit-rate                         Bit rate of aufile file
sample-freq                      Sample frequency of aufile file in Hz
audio-mode                       Mode of aufile file: mono/stereo
not-empty                        If condition is not empty (with output placeholder #t as text)
                                Parameters:
                                text
                                output (optional, default='#t')
                                empty (optional)
repeat                          Repeats text
                                Parameters:
                                text

```

```
count
```

Special characters:

escape seq.	character
\\	\
\%	%
\\$	\$
\,	,
\((
\))
\=	=
\n	New line
\t	Tab

Example

Assuming an audio file with artist 'Madonna', title 'Frozen' and album 'Ray of Light'

```
%artist% - %album% - %title%
%a% - %A% - %t%
```

Both patterns produce the following output: Madonna - Ray of Light - Frozen

```
$format (title:,bold=y) %title%\n
```

This pattern produces the output: **title:** Frozen

fixup - Music directory fixer

Performs various checks and fixes to directories of audio files.

Names

fixup

Description

Operates on directories at a time, fixing each as a unit (album, compilation, live set, etc.). All of these should have common dates, for example but other characteristics may vary. The `--type` should be used whenever possible, `lp` is the default.

The following test and fixes always apply:

1. Every file will be given an ID3 tag if one is missing.
2. Set ID3 v2.4.
3. Set a consistent album name for all files in the directory.
4. Set a consistent artist name for all files, unless the type is `various` in which case the artist may vary (but must exist).
5. Ensure each file has a title.

6. Ensure each file has a track # and track total.
7. Ensure all files have a release and original release date, unless the type is `live` in which case the recording date is set.
8. All ID3 frames of the following types are removed: USER, PRIV
9. All ID3 files have TLEN (track length in ms) set (or updated).
10. The album/dir type is set in the tag. Types of `lp` and `various` do not have this field set since the latter is the default and the former can be determined during sync. In ID3 terms the value is in TXXX (description: `eyeD3#album_type`).
11. Files are renamed as follows: - Type `various`: `${track:num} - ${artist} - ${title}` - Type `single`: `${artist} - ${title}` - All other types: `${artist} - ${track:num} - ${title}` - A rename template can be supplied in `-file-rename-pattern`
12. Directories are renamed as follows: - Type `live`: `${best_date:prefer_recording} - ${album}` - All other types: `${best_date:prefer_release} - ${album}` - A rename template can be supplied in `-dir-rename-pattern`

Album types:

- `lp`: A traditional “album” of songs from a single artist. No extra info is written to the tag since this is the default.
- `ep`: A short collection of songs from a single artist. The string ‘ep’ is written to the tag’s `eyeD3#album_type` field.
- `various`: A collection of songs from different artists. The string ‘various’ is written to the tag’s `eyeD3#album_type` field.
- `live`: A collection of live recordings from a single artist. The string ‘live’ is written to the tag’s `eyeD3#album_type` field.
- `compilation`: A collection of songs from various recordings by a single artist. The string ‘compilation’ is written to the tag’s `eyeD3#album_type` field. Compilation dates, unlike other types, may differ.
- `demo`: A demo recording by a single artist. The string ‘demo’ is written to the tag’s `eyeD3#album_type` field.
- `single`: A track that should no be associated with an album (even if it has album metadata). The string ‘single’ is written to the tag’s `eyeD3#album_type` field.

Options

```
--file-rename-pattern 12. Directories are renamed as follows: - Type
`live`: ${best_date:prefer_recording} - ${album} - All other types:
${best_date:prefer_release} - ${album} - A rename template can be supplied
in --dir-rename-pattern Album types: - `lp`: A traditinal "album" of
songs from a single artist. No extra info is written to the tag since this
is the default. - `ep`: A short collection of songs from a single
artist. The string 'ep' is written to the tag's `eyeD3#album_type`
field. - `various`: A collection of songs from different artists. The
string 'various' is written to the tag's `eyeD3#album_type` field. -
`live`: A collection of live recordings from a single artist. The string
'live' is written to the tag's `eyeD3#album_type` field. -
`compilation`: A collection of songs from various recordings by a single
artist. The string 'compilation' is written to the tag's
`eyeD3#album_type` field. Compilation dates, unlike other types, may
differ. - `demo`: A demo recording by a single artist. The string 'demo'
is written to the tag's `eyeD3#album_type` field. - `single`: A track
that should no be associated with an album (even if it has album
```

```

metadata). The string 'single' is written to the tag's
``eyeD3#album_type`` field.

-t {lp,ep,compilation,live,various,demo,single}, --type {lp,ep,compilation,live,
↳various,demo,single}
    How to treat each directory. The default is 'lp',
    although you may be prompted for an alternate choice
    if the files look like another type.
--fix-case
    Fix casing on each string field by capitalizing each
    word.
-n, --dry-run
    Only print the operations that would take place, but
    do not execute them.
--no-prompt
    Exit if prompted.
--dotted-dates
    Separate date with '.' instead of '-' when naming
    directories.
--file-rename-pattern FILE_RENAME_PATTERN
    Rename file (the extension is not affected) based on
    data in the tag using substitution variables: $album,
    $album_artist, $artist, $best_date,
    $best_date:prefer_recording,
    $best_date:prefer_recording:year,
    $best_date:prefer_release,
    $best_date:prefer_release:year, $best_date:year,
    $disc:num, $disc:total, $file, $file:ext,
    $original_release_date, $original_release_date:year,
    $recording_date, $recording_date:year, $release_date,
    $release_date:year, $title, $track:num, $track:total
--dir-rename-pattern DIR_RENAME_PATTERN
    Rename directory based on data in the tag using
    substitution variables: $album, $album_artist,
    $artist, $best_date, $best_date:prefer_recording,
    $best_date:prefer_recording:year,
    $best_date:prefer_release,
    $best_date:prefer_release:year, $best_date:year,
    $disc:num, $disc:total, $file, $file:ext,
    $original_release_date, $original_release_date:year,
    $recording_date, $recording_date:year, $release_date,
    $release_date:year, $title, $track:num, $track:total

```

itunes-podcast - Convert files so iTunes recognizes them as podcasts

Adds (or removes) the tags necessary for Apple iTunes to identify the file as a podcast.

Names

itunes-podcast

Description

Options

```
--add      Add the podcast frames.  
--remove   Remove the podcast frames.
```

Example

```
$ eyeD3 -P itunes-podcast example.id3  
  
/home/travis/devel/eyeD3/git/example.id3  
iTunes podcast? :-(  
  
$ eyeD3 -P itunes-podcast example.id3 --add  
  
/home/travis/devel/eyeD3/git/example.id3  
iTunes podcast? :-(  
Adding...  
iTunes podcast? :-(  
  
$ eyeD3 -P itunes-podcast example.id3 --remove  
  
/home/travis/devel/eyeD3/git/example.id3  
iTunes podcast? :-(  
Removing...  
iTunes podcast? :-(
```

genres - ID3 Genre List

Display the full list of standard ID3 genres.

Names

genres

Description

ID3 v1 defined a list of genres and mapped them to numeric values so they can be stored as a single byte. It is *recommended* that these genres are used although most newer software (including eyeD3) does not care.

Options

```
-1, --single-column  List on genre per line.
```

Example

```

$ eyeD3 --plugin=genres

lameinfo (xing) - Lame (Xing) Header Information

Outputs lame header (if one exists) for file.

Names

lameinfo (aliases: xing)

Description

The 'lame' (or xing) header provides extra information about the mp3 that is useful to players and encoders but not officially part of the mp3 specification. Variable bit rate mp3s, for example, use this header.

For more details see [here](#)

Options

```
No extra options supported
```

Example

```
$ eyeD3 -P lameinfo src/test/data/notag-vbr.mp3

notag-vbr.mp3 [ 5.98 MB ]
-----
Encoder Version      : LAME3.91
LAME Tag Revision   : 0
VBR Method          : Variable Bitrate method2 (mtrh)
Lowpass Filter      : 19500
Encoding Flags      : --nspsytune
ATH Type            : 3
Bitrate (Minimum)   : 0
Encoder Delay       : 576 samples
Encoder Padding     : 1848 samples
Noise Shaping       : 1
Stereo Mode         : Joint
Unwise Settings     : False
Sample Frequency    : 44.1 kHz
MP3 Gain            : 0 (+0.0 dB)
Preset              : Unknown
Surround Info       : None
Music Length        : 5.98 MB
Music CRC-16        : 675C
LAME Tag CRC-16     : 5B62
```

nfo - (I)NFO File Generator

Create NFO files for each directory scanned.

Names

nfo

Description

Each directory scanned is treated as an album and a [NFO](#) file is written to standard out.

NFO files are often found in music archives.

Options

```
No extra options supported
```

Example

```
$ eyeD3 -P nfo ~/music/Nine\ Inch\ Nails/1992\ -\ Broken/
```

```
Artist   : Nine Inch Nails
Album    : Broken
Released : 1992
Genre    : Noise
```

```
Source   :
Encoder  : LAME3.95
Codec    : mp3
Bitrate  : ~167 K/s @ 44100 Hz, Joint stereo
Tag      : ID3 v2.3
```

Ripped By:

Track Listing

```
-----
1. Pinion                (01:02)
2. Wish                  (03:46)
3. Last                  (04:44)
4. Help Me I am in Hell (01:56)
5. Happiness in Slavery (05:21)
6. Gave Up               (04:08)
7. Physical (You're So) (05:29)
8. Suck                  (05:07)

```

pymod - Use simple python modules as eyeD3 plugins

Imports a Python module file and calls its functions for the the various plugin events.

Names

pymod

Description

If no module is provided (see `-m/--module`) a file named `eyeD3mod.py` in the current working directory is imported. If any of the following methods exist they still be invoked:

def audioFile(audio_file): ““Invoked for every audio file that is encountered. The `audio_file` is of type `eyed3.core.AudioFile`; currently this is the concrete type `eyed3.mp3.Mp3AudioFile`.”” pass

def audioDir(d, audio_files, images): ““This function is invoked for any directory (`d`) that contains audio (`audio_files`) or image (`images`) media.”” pass

def done(): ““This method is invoked before successful exit.”” pass

Options

```
-m MODULE, --module MODULE
                        The Python module to invoke. The default is
                        ./eyeD3mod.py
```

Example

TODO

stats - Music Collection Statistics

Computes statistics for all audio files scanned.

Names

stats

Description

Options

```
--verbose Show details for each file with rule violations.
```

xep-118 - Jabber (XMPP) Tune Format

Outputs all tags in XEP-118 XML format. (see: <http://xmpp.org/extensions/xep-0118.html>)

Names

xep-118

Description

Options

```
No extra options supported
```

Configuration Files

Command line options can be read from a configuration file using the `-C/--config` option. It expects a path to an Ini file contain sections with option values. A sample config file, for example:

```
# eyeD3 config file.
# default: ~/.eyeD3/config.ini
# override using -c/--config
[default]

# Default plugin to use.
plugin =

# General options to always use. These can be plugin specific but SHOULD NOT be.
# Any -C/--config and -P/--plugin options are ignored.
options =
#options = --pdb

# Extra directories to load plugins. Separated by ':'
plugin_path = ~/.eyeD3

# vim: set filetype=dosini:
```

If the file `${HOME}/.eyeD3/config.ini` exists it is loaded each time eyeD3 is run and the values take effect. This can be disabled with `--no-config`.

Custom Plugins

Plugins are any class found in the plugin search path (see ‘plugin_path’ in *Configuration Files*) that inherits from `eyed3.plugins.Plugin`. The interface is simple, the basic attributes of the plugin (name, description, etc.) are set using member variables and for each file eyeD3 traverses (using the given path(s) and optional `--exclude` options) the method `handleFile` will be called. The return value of this call is ignored, but if you wish to halt processing of files a `StopIteration` exception can be raised. Here is where the plugin should do whatever interesting things it would like to do with the files it is passed. When all input files are processed the method `handleDone` is called and the program exits. Below is an ‘echo’ plugin that prints each filename/path and the file’s mime-type.

```
from __future__ import print_function
import eyed3
from eyed3.plugins import Plugin
from eyed3.utils import guessMimetype

eyed3.require((0, 7))

class EchoPlugin(eyed3.plugins.Plugin):
    NAMES = ["echo"]
    SUMMARY = u"Displays each filename and mime-type passed to the plugin"
```

```
def handleFile(self, f):
    print("%s\t[ %s ]" % (f, guessMimetype(f)))
```

Many plugins might prefer to deal with only file types eyeD3 natively supports, namely mp3 audio files. To automatically load `eyed3.core.AudioFile` objects using `eyed3.core.load()` inherit from the `eyed3.plugins.LoaderPlugin` class. In this model the member `self.audio_file` is initialized to the parsed mp3/id3 objects. If the file is not a supported audio file type the value is set to `None`.

In the next example the `LoaderPlugin` is used to set the `audio_file` member variable which contains the info and tag objects.

```
# -*- coding: utf-8 -*-
from __future__ import print_function
import eyed3
from eyed3.plugins import LoaderPlugin

eyed3.require((0, 7))

class Echo2Plugin(LoaderPlugin):
    SUMMARY = u"Displays details about audio files"
    NAMES = ["echo2"]

    def handleFile(self, f):
        super(Echo2Plugin, self).handleFile(f)

        if not self.audio_file:
            print("%s: Unsupported type" % f)
        else:
            print("Audio info: %s Metadata tag: %s " %
                  ("yes" if self.audio_file.info else "no",
                   "yes" if self.audio_file.tag else "no"))
```

4.2.2 Compliance

ID3

Unsupported Features

- ID3 frame encryption
- Writing of sync-safe data (i.e. unsynchronized) because it is 2012. Reading of unsynchronized tags (v2.3) and frames (v2.4) is supported.

Dates

One of the major differences between 2.3 and 2.4 is dates.

ID3 v2.3 Date Frames

- TDAT date (recording date of form DDMM, always 4 bytes)
- TYER year (recording year of form YYYY, always 4 bytes)
- TIME time (recording time of form HHMM, always 4 bytes)
- TORY orig release year
- TRDA recording date (more freeform replacement for TDAT, TYER, TIME. e.g., “4th-7th June, 12th June” in combination with TYER)
- TDLY playlist delay (also defined in ID3 v2.4)

ID3 v2.4 Date Frames

All v2.4 dates follow ISO 8601 formats.

- TDEN encoding datetime
- TDOR orig release date
- TDRC recording date
- TDRL release date
- TDTG tagging time
- TDLY playlist delay (also defined in ID3 v2.3)

From the ID3 specs:

```
yyyy-MM-ddTHH:mm:ss (year, "-", month, "-", day, "T", hour (out of 24), ":", minutes, ":", seconds), but the precision may be reduced by removing as many time indicators as wanted. Hence valid timestamps are yyyy, yyyy-MM, yyyy-MM-dd, yyyy-MM-ddTHH, yyyy-MM-ddTHH:mm and yyyy-MM-ddTHH:mm:ss. All time stamps are UTC. For durations, use the slash character as described in 8601, and for multiple non- contiguous dates, use multiple strings, if allowed by the frame definition.
```

The ISO 8601 ‘W’ delimiter for numeric weeks is NOT supported.

Times that contain a ‘Z’ at the end to signal the time is UTC is supported.

Common Date Frame Extensions

MusicBrainz uses *XDOR* in v2.3 tags as the **full** original release date, whereas *TORY* (v2.3) only represents the release year. Version 2.4 does not use/need this extension since *TDOR* is available.

v2.4 <-> 2.3 mappings

When converting to/from v2.3 and v2.4 it is necessary to convert date frames. The following is the mappings eyeD3 uses when converting.

Version 2.3 → version 2.4

- TYER, TDAT, TIME → TDRC

- TORY → TDOR
- TRDA → none
- XDOR → TDOR

If both *TORY* and *XDOR* exist, *XDOR* is preferred.

Version 2.4 → version 2.3

- TDRC → TYER, TDAT, TIME
- TDOR → TORY
- TDRL → TORY
- TDEN → none
- TDTG → none

Non Standard Frame Support

NCON

A MusicMatch extension of unknown binary format. Frames of this type are parsed as raw `Frame` objects, therefore the data is not parsed. The frames are preserved and can be deleted and written (as is).

TCMP

An iTunes extension to signify that a track is part of a compilation. This frame is handled by `TextFrame` and the data is either a '1' if part of a compilation or '0' (or empty) if not.

XSOA, XSOP, XSOT

These are alternative sort-order strings for album, performer, and title, respectively. They are often added to ID3v2.3 tags while v2.4 does not require them since TSOA, TSOP, and TSOT are native frames.

These frames are preserved but are not written when using v2.3. If the tag is converted to v2.4 then the corresponding native frame is used.

XDOR

A MusicBrainz extension for the **full** original release date, since TORY only contains the year of original release. In ID3 v2.4 this frame became TDOR.

PCST, WFED, TKWD, TDES, TGID

Apple extensions for podcasts.

4.2.3 eyed3

eyed3 package

Subpackages

eyed3.id3 package

Submodules

eyed3.id3.apple module

Here lies Apple frames, all of which are non-standard. All of these would have been standard user text frames by anyone not being a bastard, on purpose.

```
class eyed3.id3.apple.PCST (id=b'PCST')
    Bases: eyed3.id3.frames.Frame
```

Indicates a podcast. The 4 bytes of data is undefined, and is typically all 0.

```
render ()
```

```
class eyed3.id3.apple.TKWD (id=b'TKWD')
    Bases: eyed3.id3.frames.TextFrame
```

Podcast keywords.

```
class eyed3.id3.apple.TDES (id=b'TDES')
    Bases: eyed3.id3.frames.TextFrame
```

Podcast description. One encoding byte followed by text per encoding.

```
class eyed3.id3.apple.TGID (id=b'TGID')
    Bases: eyed3.id3.frames.TextFrame
```

Podcast URL of the audio file. This should be a W frame!

```
class eyed3.id3.apple.WFED (id=b'WFED', url="")
    Bases: eyed3.id3.frames.TextFrame
```

Another podcast URL, the feed URL it is said.

eyed3.id3.frames module

```
exception eyed3.id3.frames.FrameException (*args)
    Bases: eyed3.Error
```

```
class eyed3.id3.frames.Frame (*args, **kwargs)
    Bases: object
```

```
header
```

```
parse (*args, **kwargs)
```

```
render ()
```

```

images

encoding_date

best_release_date

This method tries its best to return a date of some sort, amongst all the possible date frames. The order of preference for a release date is 1) date of original release 2) date of this versions release 3) the recording date. Or None is returned.

getBestDate (*prefer_recording_date=False*)

This method returns a date of some sort, amongst all the possible date frames. The order of preference is:

1. date of original release
2. date of this versions release
3. the recording date.

Unless `prefer_recording_date` is `True` in which case the order is 3, 1, 2.

None will be returned if no dates are available.

release_date

The date the audio was released. This is NOT the original date the work was released, instead it is more like the pressing or version of the release. Original release date is usually what is intended but many programs use this frame and/or don't distinguish between the two.

original_release_date

The date the work was originally released.

recording_date

The date of the recording. Many applications use this for release date regardless of the fact that this value is rarely known, and release dates are more correct.

tagging_date

lyrics

disc_num

objects

privates

popularities

genre

non_std_genre

`partial(func, *args, **keywords)` - new function with partial application of the given arguments and keywords.

user_text_frames

payment_url

publisher_url**user_url_frames****unique_file_ids****terms_of_use**

save (*filename=None, version=None, encoding=None, backup=False, preserve_file_time=False, max_padding=None*)

Save the tag. If *filename* is not give the value from the *file_info* member is used, or a *TagException* is raised. The *version* argument can be used to select an ID3 version other than the version read. Select text encoding with ``*encoding* or use the existing (or default) encoding. If *backup* is *True* the original file is preserved; likewise if *preserve_file_time* is *True* the file's modification/access times are not updated.

static remove (*filename, version=(3, None, None), preserve_file_time=False*)

chapters**table_of_contents****album_type****artist_origin**

Returns a 3-tuple: (city, state, country) Any may be *None*.

frameiter (*fids=None*)

A iterator for tag frames. If *fids* is passed it must be a list of frame IDs to filter and return.

class eyed3.id3.tag.**FileInfo** (*file_name, tagsz=0, tpadd=0*)

Bases: *object*

This class is for storing information about a parsed file. It contains info such as the filename, original tag size, and amount of padding; all of which can make rewriting faster.

initStatTimes ()**touch** (*times*)

times is a 2-tuple of (atime, mtime).

class eyed3.id3.tag.**AccessorBase** (*fid, fs, match_func=None*)

Bases: *object*

get (**args, **kwargs*)**remove** (**args, **kwargs*)

Returns the removed item or *None* if not found.

class eyed3.id3.tag.TagTemplate (pattern, path_friendly=True, dotted_dates=False)
    Bases: string.Template

    pattern = re.compile('\n \\$(?:\n (?P<escaped>\\\$) | # Escape sequence of two delimit
    idpattern = '[_a-z][_a-z0-9:]*'

    substitute (tag, zeropad=True)

    safe_substitute (tag, zeropad=True)

```

Module contents

```

eyed3.id3.ID3_V1 = (1, None, None)
    Version 1, 1.0 or 1.1

eyed3.id3.ID3_V1_0 = (1, 0, 0)
    Version 1.0, specifically

eyed3.id3.ID3_V1_1 = (1, 1, 0)
    Version 1.1, specifically

eyed3.id3.ID3_V2 = (2, None, None)
    Version 2, 2.2, 2.3 or 2.4

eyed3.id3.ID3_V2_2 = (2, 2, 0)
    Version 2.2, specifically

eyed3.id3.ID3_V2_3 = (2, 3, 0)
    Version 2.3, specifically

eyed3.id3.ID3_V2_4 = (2, 4, 0)
    Version 2.4, specifically

eyed3.id3.ID3_DEFAULT_VERSION = (2, 4, 0)
    The default version for eyeD3 tags and save operations.

eyed3.id3.ID3_ANY_VERSION = (3, None, None)
    Useful for operations where any version will suffice.

eyed3.id3.LATIN1_ENCODING = b'\x00'
    Byte code for latin1

eyed3.id3.UTF_16_ENCODING = b'\x01'
    Byte code for UTF-16

eyed3.id3.UTF_16BE_ENCODING = b'\x02'
    Byte code for UTF-16 (big endian)

eyed3.id3.UTF_8_ENCODING = b'\x03'
    Byte code for UTF-8 (Not supported in ID3 versions < 2.4)

eyed3.id3.DEFAULT_LANG = b'eng'
    Default language code for frames that contain a language portion.

```

`eyed3.id3.isValidVersion(v, fully_qualified=False)`

Check the tuple `v` against the list of valid ID3 version constants. If `fully_qualified` is `True` it is enforced that there are 3 components to the version in `v`. Returns `True` when valid and `False` otherwise.

`eyed3.id3.normalizeVersion(v)`

If version tuple `v` is of the non-specific type (`v1` or `v2`, any, etc.) a fully qualified version is returned.

`eyed3.id3.versionToString(v)`

Conversion version tuple `v` to a string description.

exception `eyed3.id3.GenreException(*args)`

Bases: `eyed3.Error`

Exception type for exceptions related to genres.

class `eyed3.id3.Genre(*args, **kwargs)`

Bases: `eyed3.compat.UnicodeMixin`

A genre in terms of a name and an `id`. Only when name is a “standard” genre (as defined by ID3 v1) will `id` be a value other than `None`.

id

The Genre’s `id` property. When setting the value is strictly enforced and if the value is not a valid genre code a `ValueError` is raised. Otherwise the `id` is set **and** the name property is updated to the code’s string name.

name

The Genre’s name property. When setting the value the name is looked up in the standard genre map and if found the `id` property is set to the numeric value **and** the name is normalized to the string found in the map. Non standard genres are set (with a warning log) and the `id` is set to `None`. It is valid to set the value to `None`.

static parse `(*args, **kwargs)`

class `eyed3.id3.GenreMap(*args)`

Bases: `dict`

Classic genres defined around ID3 v1 but suitable anywhere. This class is used primarily as a way to map numeric genre values to a string name. Genre strings on the other hand are not required to exist in this list.

The optional `*args` are passed directly to the `dict` constructor.

GENRE_MIN = 0

GENRE_MAX = 191

ID3_GENRE_MIN = 0

ID3_GENRE_MAX = 79

WINAMP_GENRE_MIN = 80

WINAMP_GENRE_MAX = 191

class `eyed3.id3.TagFile(path, version=(3, None, None))`

Bases: `eyed3.core.AudioFile`

A shim class for dealing with files that contain only ID3 data, no audio.

initTag `(version=(2, 4, 0))`

Add a `id3.Tag` to the file (removing any existing tag if one exists).

`eyed3.id3.ID3_GENRES` = `['Blues', 'Classic Rock', 'Country', 'Dance', 'Disco', 'Funk', 'Grun`
ID3 genres, as defined in ID3 v1. The position in the list is the genre’s numeric byte value.

`eyed3.id3.genres = {0: 'Blues', 1: 'Classic Rock', 2: 'Country', 3: 'Dance', 4: 'Disc`
 A map of standard genre names and IDs per the ID3 v1 genre definition.

eyed3.mp3 package

Submodules

eyed3.mp3.headers module

`eyed3.mp3.headers.isValidHeader` (*header*)

Determine if header (an integer, 4 bytes compared) is a valid mp3 frame header.

`eyed3.mp3.headers.findHeader` (*fp*, *start_pos=0*)

Locate the first mp3 header in file stream *fp* starting a offset *start_pos* (defaults to 0). Returned is a 3-tuple containing the offset where the header was found, the header as an integer, and the header as 4 bytes. If no header is found *header_int* will equal 0.

`eyed3.mp3.headers.timePerFrame` (*mp3_header*, *vbr*)

Computes the number of seconds per mp3 frame. It can be used to compute overall playtime and bitrate. The mp3 layer and sample rate from *mp3_header* are used to compute the number of seconds (fractional float point value) per mp3 frame. Be sure to set *vbr* True when dealing with VBR, otherwise playtimes may be incorrect.

`eyed3.mp3.headers.compute_time_per_frame` (*mp3_header*)

Deprecated, use `timePerFrame` instead.

class `eyed3.mp3.headers.Mp3Header` (*header_data=None*)

Bases: `object`

Header container for MP3 frames.

decode (*header*)

class `eyed3.mp3.headers.VbriHeader`

Bases: `object`

decode (*frame*)

class `eyed3.mp3.headers.XingHeader`

Bases: `object`

Header class for the Xing header extensions.

decode (*frame*)

class `eyed3.mp3.headers.LameHeader` (*frame*)

Bases: `dict`

Read the LAME info tag. *frame* should be the first frame of an mp3.

ENCODER_FLAGS = {'NOGAP_NEXT': 4, 'NSSAFEJOINT': 2, 'NSPSYTUNE': 1, 'NOGAP_PREV': 8}

PRESETS = {0: 'Unknown', 480: 'V2', 450: 'V5', 420: 'V8', 1000: 'r3mix', 1001: 'S

`SURROUND_INFO = {0: 'None', 1: 'DPL encoding', 2: 'DPL2 encoding', 3: 'Ambisonic e`

`VBR_METHODS = {0: 'Unknown', 1: 'Constant Bitrate', 2: 'Average Bitrate', 3: 'Vari`

`decode (frame)`

Decode the LAME info tag.

`eyed3.mp3.headers.lamevercmp (x, y)`

Module contents

exception `eyed3.mp3.Mp3Exception (*args)`

Bases: `eyed3.Error`

Used to signal mp3-related errors.

`eyed3.mp3.MIME_TYPES = ['audio/mpeg', 'audio/mp3', 'audio/x-mp3', 'audio/x-mpeg', 'audio/mp`

Mime-types that are recognized at MP3

`eyed3.mp3.OTHER_MIME_TYPES = ['application/octet-stream', 'audio/x-hx-aac-adts', 'audio/x-v`

Mime-types that have been seen to contain mp3 data.

`eyed3.mp3.EXTENSIONS = ['.mp3']`

Valid file extensions.

`eyed3.mp3.isMp3File (file_name)`

Does a mime-type check on `file_name` and returns True if the file is mp3, and False otherwise.

class `eyed3.mp3.Mp3AudioInfo (file_obj, start_offset, tag)`

Bases: `eyed3.core.AudioInfo`

`lame_tag = None`

If not None, the Lame header. See `eyed3.mp3.headers.LameHeader`

`bit_rate = None`

2-tuple, (vrb?:boolean, bitrate:int)

`bit_rate_str`

class `eyed3.mp3.Mp3AudioFile (path, version=(3, None, None))`

Bases: `eyed3.core.AudioFile`

Audio file container for mp3 files.

`initTag (version=(2, 4, 0))`

Add a id3.Tag to the file (removing any existing tag if one exists).

`tag`

Returns a concrete implementation of `eyed3.core.Tag`

class eyed3.plugins.xep_118.Xep118Plugin (arg_parser,                cache_files=False,
                                         track_images=False)
    Bases: eyed3.plugins.LoaderPlugin

    Constructor. If cache_files is True (off by default) then each AudioFile is appended to _file_cache
    during handleFile and the list is cleared by handleDirectory.

    NAMES = ['xep-118']

    SUMMARY = 'Outputs all tags in XEP-118 XML format. (see: http://xmpp.org/extensions/x)

    handleFile (f)

    getXML (audio_file)
```

Module contents

`eyed3.plugins.load (name=None, reload=False, paths=None)`
Returns the `eyed3.plugins.Plugin` class identified by name. If name is None then the full list of plugins is returned. Once a plugin is loaded its class object is cached, and future calls to this function will return the cached version. Use `reload=True` to refresh the cache.

```
class eyed3.plugins.Plugin (arg_parser)
    Bases: eyed3.utils.FileHandler

    Base class for all eyeD3 plugins

    SUMMARY = 'eyeD3 plugin'
        One line about the plugin

    DESCRIPTION = ''
        Detailed info about the plugin

    NAMES = []
        A list of at least one name for invoking the plugin, values [1:] are treated as alias

    start (args, config)
        Called after command line parsing but before any paths are processed. The self.args argument (the
        parsed command line) and self.config (the user config, if any) is set here.

    handleFile (f)
```

handleDone ()

Called after all file/directory processing; before program exit. The return value is passed to sys.exit (None results in 0).

class eyed3.plugins.LoaderPlugin (*arg_parser, cache_files=False, track_images=False*)

Bases: *eyed3.plugins.Plugin*

A base class that provides auto loading of audio files

Constructor. If *cache_files* is True (off by default) then each AudioFile is appended to *_file_cache* during *handleFile* and the list is cleared by *handleDirectory*.

handleFile (*f, *args, **kwargs*)

Loads *f* and sets *self.audio_file* to an instance of *eyed3.core.AudioFile* or None if an error occurred or the file is not a recognized type.

The **args* and ***kwargs* are passed to *eyed3.core.load()*.

handleDirectory (*d, _*)

Override to make use of *self._file_cache*. By default the list is cleared, subclasses should consider doing the same otherwise every AudioFile will be cached.

handleDone ()

If no audio files were loaded this simply prints "Nothing to do".

eyed3.utils package

Submodules

eyed3.utils.art module

eyed3.utils.art.FRONT_COVER = 'FRONT_COVER'

Album front cover.

eyed3.utils.art.BACK_COVER = 'BACK_COVER'

Album back cover.

eyed3.utils.art.MISC_COVER = 'MISC_COVER'

Other part of the album cover; liner notes, gate-fold, etc.

eyed3.utils.art.LOGO = 'LOGO'

Artist/band logo.

eyed3.utils.art.ARTIST = 'ARTIST'

Artist/band images.

eyed3.utils.art.LIVE = 'LIVE'

Artist/band images.

eyed3.utils.art.FILENAMES = {'BACK_COVER': ['cover-back', 'back', 'cover-back_*'], 'ARTIST': ['artist_*']}

A mapping of art types to lists of filename patterns (excluding file extension): type -> [file_pattern, ..]

eyed3.utils.art.TO_ID3_ART_TYPES = {'BACK_COVER': [4], 'ARTIST': [7, 8, 10], 'LIVE': [15, 16]}

A mapping of art types to ID3 APIC (image) types: type -> [apic_type, ..]

eyed3.utils.art.FROM_ID3_ART_TYPES = {0: 'FRONT_COVER', 1: 'FRONT_COVER', 3: 'FRONT_COVER', 4: 'BACK_COVER', 7: 'ARTIST', 8: 'ARTIST', 10: 'ARTIST', 15: 'LIVE', 16: 'LIVE'}

A mapping of ID3 art types to eyeD3 art types; the opposite of TO_ID3_ART_TYPES.

`eyed3.utils.art.matchArtFile(filename)`

Compares `filename` (case insensitive) with lists of common art file names and returns the type of art that was matched, or `None` if no types were matched.

`eyed3.utils.art.getArtFromTag(tag, type_=None)`

Returns a list of `eyed3.id3.frames.ImageFrame` objects matching `type_`, all if `type_` is `None`, or empty if tag does not contain art.

eyed3.utils.bifuncs module

`eyed3.utils.bifuncs.bytes2bin(bytes, sz=8)`

Accepts a string of `bytes` (chars) and returns an array of bits representing the bytes in big endian byte order. An optional `max sz` for each byte (default 8 bits/byte) which can be used to mask out higher bits.

`eyed3.utils.bifuncs.bin2bytes(x)`

`eyed3.utils.bifuncs.bin2dec(x)`

Convert `x`, an array of “bits” (MSB first), to it’s decimal value.

`eyed3.utils.bifuncs.bytes2dec(bytes, sz=8)`

`eyed3.utils.bifuncs.dec2bin(n, p=1)`

Convert a decimal value `n` to an array of bits (MSB first). Optionally, pad the overall size to `p` bits.

`eyed3.utils.bifuncs.dec2bytes(n, p=1)`

`eyed3.utils.bifuncs.bin2synchsafe(x)`

Convert `x`, a list of bits (MSB first), to a synch safe list of bits. (section 6.2 of the ID3 2.4 spec).

eyed3.utils.console module

`class eyed3.utils.console.AnsiCodes(codes)`

Bases: `object`

`static init(enabled)`

`class eyed3.utils.console.AnsiFore`

Bases: `object`

`GREY = 30`

`RED = 31`

`GREEN = 32`

`YELLOW = 33`

`BLUE = 34`

`MAGENTA = 35`

`CYAN = 36`

`WHITE = 37`

`RESET = 39`

`class eyed3.utils.console.AnsiBack`

Bases: `object`

`GREY = 40`

```

RED = 41
GREEN = 42
YELLOW = 43
BLUE = 44
MAGENTA = 45
CYAN = 46
WHITE = 47
RESET = 49

```

```
class eyed3.utils.console.AnsiStyle
```

```
Bases: object
```

```

RESET_ALL = 0
BRIGHT = 1
RESET_BRIGHT = 22
DIM = 2
RESET_DIM = 22
ITALICS = 3
RESET_ITALICS = 23
UNDERLINE = 4
RESET_UNDERLINE = 24
BLINK_SLOW = 5
RESET_BLINK_SLOW = 25
BLINK_FAST = 6
RESET_BLINK_FAST = 26
INVERSE = 7
RESET_INVERSE = 27
STRIKE_THRU = 9
RESET_STRIKE_THRU = 29

```

```
eyed3.utils.console.ERROR_COLOR()
```

```
eyed3.utils.console.WARNING_COLOR()
```

```
eyed3.utils.console.HEADER_COLOR()
```

```
class eyed3.utils.console.Spinner(msg, file=None, step=1, chars=None, use_unicode=True,
                                  print_done=True)
```

```
Bases: object
```

A class to display a spinner in the terminal.

It is designed to be used with the *with* statement:

```

with Spinner("Reticulating splines", "green") as s:
    for item in enumerate(items):
        s.next()

```

class eyed3.utils.console.ProgressBar (*total_or_items*, *file=None*)

Bases: `object`

A class to display a progress bar in the terminal.

It is designed to be used either with the *with* statement:

```
with ProgressBar(len(items)) as bar:
    for item in enumerate(items):
        bar.update()
```

or as a generator:

```
for item in ProgressBar(items):
    item.process()
```

total_or_items [int or sequence] If an int, the number of increments in the process being tracked. If a sequence, the items to iterate over.

file [writable file-like object, optional] The file to write the progress bar to. Defaults to *sys.stdout*. If *file* is not a tty (as determined by calling its *isatty* member, if any), the scrollbar will be completely silent.

next ()

update (*value=None*)

Update the progress bar to the given value (out of the total given to the constructor).

classmethod **map** (*function*, *items*, *multiprocess=False*, *file=None*)

Does a *map* operation while displaying a progress bar with percentage complete.

```
def work(i):
    print(i)

ProgressBar.map(work, range(50))
```

Parameters:

function [function] Function to call for each step

items [sequence] Sequence where each element is a tuple of arguments to pass to *function*.

multiprocess [bool, optional] If *True*, use the *multiprocessing* module to distribute each task to a different processor core.

file [writable file-like object, optional] The file to write the progress bar to. Defaults to *sys.stdout*. If *file* is not a tty (as determined by calling its *isatty* member, if any), the scrollbar will be completely silent.

eyed3.utils.console.**printMsg** (*s*)

eyed3.utils.console.**printError** (*s*)

eyed3.utils.console.**printWarning** (*s*)

eyed3.utils.console.**printHeader** (*s*)

eyed3.utils.console.**boldText** (*s*, *fp=<_io.TextIOWrapper name='<stdout>' mode='w' encoding='UTF-8'>*, *c=None*)

eyed3.utils.console.**formatText** (*s*, *b=False*, *c=None*)

eyed3.utils.console.**cformat** (*msg*, *fg*, *bg=None*, *styles=None*)

Format *msg* with foreground and optional background. Optional *styles* lists will also be applied. The formatted string is returned.

`eyed3.utils.console.cprint` (*msg*, *fg*, *bg=None*, *styles=None*, *file=<_io.TextIOWrapper name='<stdout>' mode='w' encoding='UTF-8'>*)
 Calls `cformat` and prints the result to output stream *file*.

eyed3.utils.log module

class `eyed3.utils.log.Logger` (*name*)
 Bases: `logging.Logger`
 Base class for all loggers

verbose (*msg*, **args*, ***kwargs*)
 Log *msg* at 'verbose' level, debug < verbose < info

`eyed3.utils.log.getLogger` (*name*)

`eyed3.utils.log.initLogging` ()
 initialize the default logger with console output

eyed3.utils.prompt module

`eyed3.utils.prompt.DISABLE_PROMPT` = `None`
 Whenever a prompt occurs and this value is not `None` it can be `exit` to call `sys.exit` (see `EXIT_STATUS`) or `raise` to throw a `RuntimeError`, which can be caught if desired.

exception `eyed3.utils.prompt.PromptExit`
 Bases: `RuntimeError`
 Raised when `DISABLE_PROMPT` is 'raise' and `prompt` is called.

`eyed3.utils.prompt.parseIntList` (*resp*)

`eyed3.utils.prompt.prompt` (*msg*, *default=None*, *required=True*, *type_=<class 'str'>*, *validate=None*, *choices=None*)
 Prompt user for input, the prequest is in *msg*. If *default* is not `None` it will be displayed as the default and returned if not input is entered. The value `None` is only returned if *required* is `False`. The response is passed to *type_* for conversion (default is `unicode`) before being returned. An optional list of valid responses can be provided in *choices*.

Module contents

class `eyed3.utils.MagicTypes`
 Bases: `magic.Magic`
guess_type (*filename*)

`eyed3.utils.guessMimetype` (*filename*, *with_encoding=False*)
 Return the mime-type for *filename*. If *with_encoding* is `True` the encoding is included and a 2-tuple is returned, (mine, enc).

`eyed3.utils.walk` (*handler*, *path*, *excludes=None*, *fs_encoding='utf-8'*)
 A wrapper around `os.walk` which handles exclusion patterns and multiple path types (`unicode`, `pathlib.Path`, `bytes`).

class `eyed3.utils.FileHandler`
 Bases: `object`
 A handler interface for `eyed3.utils.walk()` callbacks.

handleFile (*f*)

Called for each file walked. The file *f* is the full path and the return value is ignored. If the walk should abort the method should raise a `StopIteration` exception.

handleDirectory (*d, files*)

Called for each directory *d* **after** `handleFile` has been called for each file in *files*. `StopIteration` may be raised to halt iteration.

handleDone ()

Called when there are no more files to handle.

`eyed3.utils.requireUnicode` (**args*)

Function decorator to enforce unicode argument types. `None` is a valid argument value, in all cases, regardless of not being unicode. **args* Positional arguments may be numeric argument index values (`requireUnicode(1, 3)` - requires argument 1 and 3 are unicode) or keyword argument names (`requireUnicode("title")`) or a combination thereof.

`eyed3.utils.requireBytes` (**args*)

Function decorator to enforce unicode argument types. `None` is a valid argument value, in all cases, regardless of not being unicode. **args* Positional arguments may be numeric argument index values (`requireUnicode(1, 3)` - requires argument 1 and 3 are unicode) or keyword argument names (`requireUnicode("title")`) or a combination thereof.

`eyed3.utils.encodeUnicode` (*replace=True*)

`eyed3.utils.formatTime` (*seconds, total=None, short=False*)

Format *seconds* (number of seconds) as a string representation. When *short* is `False` (the default) the format is:

HH:MM:SS.

Otherwise, the format is exactly 6 characters long and of the form:

1w 3d 2d 4h 1h 5m 1m 4s 15s

If *total* is not `None` it will also be formatted and appended to the result separated by `' / '`.

`eyed3.utils.KB_BYTES = 1024`

Number of bytes per KB (2^{10})

`eyed3.utils.MB_BYTES = 1048576`

Number of bytes per MB (2^{20})

`eyed3.utils.GB_BYTES = 1073741824`

Number of bytes per GB (2^{30})

`eyed3.utils.KB_UNIT = 'KB'`

Kilobytes abbreviation

`eyed3.utils.MB_UNIT = 'MB'`

Megabytes abbreviation

`eyed3.utils.GB_UNIT = 'GB'`

Gigabytes abbreviation

`eyed3.utils.formatSize` (*size, short=False*)

Format *size* (number of bytes) into string format doing KB, MB, or GB conversion where necessary.

When *short* is `False` (the default) the format is smallest unit of bytes and largest gigabytes; `'234 GB'`. The short version is 2-4 characters long and of the form

256b 64k 1.1G

`eyed3.utils.formatTimeDelta` (*td*)

Format a timedelta object *td* into a string.

`eyed3.utils.chunkCopy` (*src_fp, dest_fp, chunk_sz=524288*)

Copy *src_fp* to *dest_fp* in *chunk_sz* byte increments.

class `eyed3.utils.ArgumentParser` (**args, **kwargs*)

Bases: `argparse.ArgumentParser`

Subclass of `argparse.ArgumentParser` that adds version and log level options.

class `eyed3.utils.LoggingAction` (**args, **kwargs*)

Bases: `argparse._AppendAction`

`eyed3.utils.datePicker` (*thing, prefer_recording_date=False*)

This function returns a date of some sort, amongst all the possible dates (members called `release_date`, `original_release_date`, and `recording_date` of type `eyed3.core.Date`).

The order of preference is: 1) date of original release 2) date of this versions release 3) the recording date.

Unless `prefer_recording_date` is `True` in which case the order is 3, 1, 2.

None will be returned if no dates are available.

`eyed3.utils.makeUniqueFileName` (*file_path, uniq=""*)

The `file_path` is the desired file name, and it is returned if the file does not exist. In the case that it already exists the path is adjusted to be unique. First, the `uniq` string is added, and then a counter is used to find a unique name.

Submodules

eyed3.compat module

Compatibility for various versions of Python (e.g. 2.6, 2.7, and 3.3)

`eyed3.compat.chr` (*i*)

byte strings units are ints

`eyed3.compat.cmp` (*a, b*)

`eyed3.compat.b` (*x, encoder=None*)

`eyed3.compat.intToByteString` (*n*)

Convert the integer *n* to a single character byte string.

`eyed3.compat.byteiter` (*bites*)

`eyed3.compat.byteOrd` (*bite*)

The utility handles the following difference with byte strings in Python 2 and 3:

`b"123"[1] == b"2"` (Python2) `b"123"[1] == 50` (Python3)

As this function name implies, the ordinal value is returned given either a byte string of length 1 (python2) or a integer value (python3). With Python3 the value is simply return.

`eyed3.compat.importmod` (*mod_file*)

Imports a Ptyhon module referenced by absolute or relative path `mod_file`. The module is returned.

class `eyed3.compat.UnicodeMixin`

Bases: `object`

A shim to handle `__unicode__` missing from Python3. Inspired by: <http://lucumr.pocoo.org/2011/1/22/forwards-compatible-python/>

eyed3.core module

Basic core types and utilities.

`eyed3.core.AUDIO_NONE = 0`
 Audio type selector for no audio.

`eyed3.core.AUDIO_MP3 = 1`
 Audio type selector for mpeg (mp3) audio.

`eyed3.core.TXXX_ALBUM_TYPE = 'eyeD3#album_type'`
 A key that can be used in a TXXX frame to specify the type of collection (or album) a file belongs. See `eyed3.core.ALBUM_TYPE_IDS`.

`eyed3.core.TXXX_ARTIST_ORIGIN = 'eyeD3#artist_origin'`
 A key that can be used in a TXXX frame to specify the origin of an artist/band. i.e. where they are from. The format is: city<tab>state<tab>country

`eyed3.core.load(path, tag_version=None)`
 Loads the file identified by `path` and returns a concrete type of `eyed3.core.AudioFile`. If `path` is not a file an `IOError` is raised. `None` is returned when the file type (i.e. mime-type) is not recognized. The following `AudioFile` types are supported:

- `eyed3.mp3.Mp3AudioFile` - For mp3 audio files.
- `eyed3.id3.TagFile` - For raw ID3 data files.

If `tag_version` is not `None` (the default) only a specific version of metadata is loaded. This value must be a version constant specific to the eventual format of the metadata.

class `eyed3.core.AudioInfo`
 Bases: `object`

A base container for common audio details.

time_secs = 0
 The number of seconds of audio data (i.e., the playtime)

size_bytes = 0
 The number of bytes of audio data.

class `eyed3.core.Tag` (*title=None, artist=None, album=None, album_artist=None, track_num=None*)
 Bases: `object`

An abstract interface for audio tag (meta) data (e.g. artist, title, etc.)

read_only = False

title

artist

album

album_artist

track_num

Track number property. Must return a 2-tuple of (track-number, total-number-of-tracks). Either tuple value may be `None`.

class `eyed3.core.AudioFile` (*path*)
 Bases: `object`

Abstract base class for audio file types (`AudioInfo` + `Tag`)

Construct with a path and invoke `_read`. All other members are set to `None`.

rename (*name*, *fsencoding*='utf-8', *preserve_file_time*=False)

Rename the file to *name*. The encoding used for the file name is `eyed3.LOCAL_FS_ENCODING` unless overridden by *fsencoding*. Note, if the target file already exists, or the full path contains non-existent directories the operation will fail with `IOError`. File times are not modified when *preserve_file_time* is `True`, `False` is the default.

info

Returns a concrete implementation of `eyed3.core.AudioInfo`

tag

Returns a concrete implementation of `eyed3.core.Tag`

path

The absolute path of this file.

class `eyed3.core.Date` (*year*, *month*=None, *day*=None, *hour*=None, *minute*=None, *second*=None)

Bases: `object`

A class for representing a date and time (optional). This class differs from `datetime.datetime` in that the default values for *month*, *day*, *hour*, *minute*, and *second* is `None` and not 'January 1, 00:00:00'. This allows for an object that is simply 1987, and not January 1 12AM, for example. But when more resolution is required those vales can be set as well.

TIME_STAMP_FORMATS = ['%Y', '%Y-%m', '%Y-%m-%d', '%Y-%m-%dT%H', '%Y-%m-%dT%H:%M', '%Y-

Valid time stamp formats per ISO 8601 and used by `c.strptime`.

year

month

day

hour

minute

second

static parse (*s*)

Parses date strings that conform to ISO-8601.

`eyed3.core.parseError` (*ex*)

A function that is invoked when non-fatal parse, format, etc. errors occur. In most cases the invalid values will be ignored or possibly fixed. This function simply logs the error.

eyed3.main module

`eyed3.main.main` (*args*, *config*)

`eyed3.main.profileMain` (*args*, *config*)

This is the main function for profiling <http://code.google.com/appengine/kb/commontasks.html#profiling>

`eyed3.main.setFileScannerOpts` (*arg_parser*, *paths_metavar*='PATH', *paths_help*='Files or directory paths')

`eyed3.main.makeCmdLineParser` (*subparser*=None)

`eyed3.main.parseCommandLine` (*cmd_line_args*=None)

Module contents

`eyed3.LOCAL_ENCODING = 'UTF-8'`

The local encoding, used when parsing command line options, console output, etc. The default is always `latin1` if it cannot be determined, it is NOT the value shown.

`eyed3.LOCAL_FS_ENCODING = 'utf-8'`

The local file system encoding, the default is `latin1` if it cannot be determined.

exception `eyed3.Error` (*args)

Bases: `Exception`

Base exception type for all eyed3 errors.

4.2.4 Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

You can contribute in many ways:

Types of Contributions

Report Bugs

Report bugs at <https://github.com/nicfit/eyeD3/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

Write Documentation

eyeD3 could always use more documentation, whether as part of the official eyeD3 docs, in docstrings, or even on the web in blog posts, articles, and such.

Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/nicfit/eyeD3/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

Get Started!

Ready to contribute? Here's how to set up eyeD3 for local development.

1. Fork the *eyeD3* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/eyeD3.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv eyed3
$ cd eyed3/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ make lint
$ make test
$ make test-all    # Optional, requires multiple versions of Python
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub.:

```
$ git add .
$ git commit -m "Your detailed description of your changes."

```

7. Submit a pull request through the GitHub website.

Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.

2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.7, and 3.3, 3.4, 3.5, and for PyPy. Check <https://travis-ci.org/nicfit/eyeD3/pulls> and make sure that the tests pass for all supported Python versions.

4.2.5 Authors

eyeD3 is written and maintained by:

- Travis Shirk <travis@pobox.com>
- nicfit <travis@pobox.com>

and has been contributed to by (ordered by date of first contribution):

- Ryan Finnie <ryan@finnie.org>
- Henning Kiel <henning.kiel@rwth-aachen.de>
- Knight Walker <kwalker@kobran.org>
- Todd Zullinger <tmz@pobox.com>

4.2.6 Release History

v0.8.1 (2017-08-26) : I Can't Talk To You

New

- make `pkg-test-data` target.
- Sample mime-type tests.

Fix

- Added `python-magic` as a dependency for reliable mime-type detection. Fixes #61
- Add `pathlib` to requirements. Fixes #43.
- [doc] Fixed github URL.

v0.8 (2017-05-13) : I Don't Know My Name

Warning: This release is **NOT** API compatible with 0.7.x. The majority of the command line interface has been preserved although many options have either changed or been removed. Additionally, support for Python 2.6 has been dropped.

New

- Python 3 support (version 2.7 and \geq 3.3 supported)
- The Display plugin (`-P/--plugin display`) enables complete control over tag output. Requires `grako`. If using `pip`, `pip install eyed3[display]`. Contributed by Sebastian Patschorke.
- `Genre.parse(id3_std=False)` (and `--non-std-genres`) to disable genre # mapping.
- `eyed3.load` accept `pathlib.Path` arguments.
- `eyed3.core.AudioFile` accept `pathlib.Path` arguments.
- `eyed3.utils.walk` accept `pathlib.Path` arguments.
- New manual page. Contributed by Gaetano Guerriero
- make `test-data`

Changes

- Project home from to GitHub: <https://github.com/nicfit/eyeD3>

Fix

- Lang fixes, and no longer coerce invalids to eng.

Other

- Moved to pytest, although unittest not yet purged.

0.7.11 - 03.12.2017 (Evergreen)

New Features:

- Repo and issue tracker moved to GitHub: <https://github.com/nicfit/eyeD3>

Bug Fixes:

- [issue 78] - 'NoneType' object has no attribute 'year'
- [issue 108] - Multiple date related fixes.
- [issue 110] - Allow superfluous `--no-tagging-ttme-frame` option for backward compatibility.
- [issue 111] - The `--version` option now prints a short, version-only, message.
- [issue 116] - Allow `--year` option for backward compatibility. Converts to `--release-year`.
- [issue 117] - Fixes for `--user-text-frame` with multiple colons and similar fixes.
- [issue 125] - ID3 v1.1 encoding fixes.

0.7.10 - 12.10.2016 (Hollow)

Bug Fixes:

- [issue 97] - Missing import
- [issue 105] - Fix the rendering of default constructed `id3.TagHeader`
- Fixed `Tag.frameiter`

0.7.9 - 11.27.2015 (Collapse/Failure)

New Features:

- process files and directories in a sorted fashion. <Hans-Peter Jansen>
- display the ellipsis file name and path, and the file size right justified in `printHeader`. <Hans-Peter Jansen>
- stating to be unable to find a valid mp3 frame without a hint, where this happened is rather unfortunate. I noticed this from using `eyed3.load()` calls. <Hans-Peter Jansen>
- [fixup plugin] - Better compilation support.

Bug Fixes:

- Fixed missing 'math' import.
- [issue 81] - Replaced invalid Unicode.
- [issue 91] - Disabled ANSI codes on Windows
- [issue 92] - More friendly logging (as a module)

0.7.8 - 05.25.2015 (Chartsengrafs)

New Features:

- [pymod plugin] – A more procedural plugin interface with modules.
- [art plugin] – Extract tag art to image files, or add images to tags.
- eyed3.utils.art - High level tag art API
- eyed3.id3.frames.ImageFrame.makeFileName produces the file extension .jpg instead of .jpeg for JPEG mime-types.
- Added eyed3.utils.makeUniqueFileName for better reuse.
- [statistics plugin] – Less score deduction for lower bit rates.
- Split example plugins module into discrete plugin modules.
- [fixup plugin] – Added `-fix-case` for applying `title()` to names
- [fixup plugin] – Detects and optionally removes files determined to be cruft.
- eyed3.id3.Tag – Added `frameiter` method for iterating over tag frames.
- Added optional `preserve_file_time` argument to `eyed3.id3.Tag.remove`.
- Removed python-magic dependency, it not longer offers any value (AFAICT).

Bug Fixes:

- [issue 50] Crashing on `-remove-frame PRIV`
- [issue 75] Parse lameinfo even if `crc16` is not correct
- [issue 77] Typo in docs/installation.rst
- [issue 79] Request to update the GPL License in source files
- Fixes to `eyed3.id3.tag.TagTemplate` when expanding empty dates.
- `eyed3.plugins.Plugin.handleDone` return code is not actually used.
- [classic plugin] – Fixed ID3v1 `-verbose` bug.
- [fixup plugin] – Better date handling, album type, and many bug fixes.

0.7.5 - 09.06.2014 (Nerve Endings)

New Features:

- [issue 49] Support for album artist info. By Cyril Roelandt <tipecaml@gmail.com>
- [fixup plugin] – Custom patterns for file/directory renaming. By Matt Black <<https://bitbucket.org/mafrosis>>
- API providing simple prompts for plugins to use.
- API and TXXX frame mappings for album type (e.g. various, album, demo, etc.) and artist origin (i.e. where the artist/band is from).
- Lower cases ANSI codes and other console fixes.
- [issue 9] Added the ability to set (remove) tag padding. See `eyeD3 -max-padding` option. By Hans Meine.
- Tag class contains `read_only` attribute than can be set to `True` to disable the `save` method.

- [classic plugin] – Added `--track-offset` for incrementing/decrementing the track number.
- [fixup plugin] – Check for and fix cover art files.

Bug Fixes:

- Build from pypi when `paver` is not available.
- [issue 46] Disable ANSI color codes when `TERM == "dumb"`
- [issue 47] Locking around `libmagic`.
- [issue 54] Work around for zero-padded utf16 strings.
- [issue 65] Safer tempfile usage.
- [issue 65] Better default v1.x genre.

0.7.3 - 07.12.2013 (Harder They Fall)

Bug fixes:

- Allow `setup.py` to run with having `paver` installed.
- [statistics plugin] Don't crash when 0 files are processed.

0.7.2 - 07.06.2013 (Nevertheless)

New Features:

- Python 2.6 is now supported if `argparse` and `ordereddict` dependencies are installed. Thanks to Bouke Versteegh for much of this.
- More support and bug fixes for [ID3 chapters](#) and [table-of-contents](#).
- [issue 28] [classic plugin] `-d/-D` options for setting tag disc number and disc set total.
- Frames are always written in sorted order, so if a tag is rewritten with no values changed the file's checksum remains the same.
- Documentation and examples are now included in source distribution.
- [classic plugin] Removed `-p` for setting publisher since using it when `-P` is intended is destructive.
- [classic plugin] Supports `--no-color` to disable color output. Note, this happens automatically if the output streams is not a TTY.
- `Tag.save` supports preserving the file modification time; and option added to classic plugin.
- [statistics plugin] Added rules for "lint-like" checking of a collection. The rules are not yet configurable.
- `ERROR` is now the default log level.

Bug fixes:

- Various fixes for PRIV frames, error handling, etc. from Bouke Versteegh
- Convert `'/'` to `'-'` in TagTemplate names (i.e. `-rename`)
- Drop TSIZ frames when converting to ID3 v2.4
- ID3 tag padding size now set correctly.
- Fixes for Unicode paths.

- License clarification in pkg-info.
- The `-b setup.py` argument is now properly supported.
- [issue 10] Magic module *hasattr* fix.
- [issue 12] More robust handling of bogus play count values.
- [issue 13] More robust handling of bogus date values.
- [issue 18] Proper unicode handling of APIC descriptions.
- [issue 19] Proper use of `argparse.ArgumentTypeError`
- [issue 26] Allow TCMP frames when parsing.
- [issue 30] Accept more invalid frame types (iTunes)
- [issue 31] Documentation fixes.
- [issue 31] Fix for bash completion script.
- [issue 32] Fix for certain mp3 bit rate and play time computations.

0.7.1 - 11.25.2012 (Feel It)

New Features:

- [issue 5] Support for ID3 chapters and table-of-contents frames (i.e.CHAP and CTOC).
- A new plugin for toggling the state of iTunes podcast files. In other words, PCST and WFED support. Additionally, the Apple “extensions” frames TKWD, TDES, and TGID are supported. Run `eyeD3 -P itunes-podcast --help` for more info.
- Native frame type for POPM (Popularity meter). See the `eyed3.id3.tag.Tag.popularities()` accessor method.
- Plugins can deal with traversed directories instead of only file-by-file. Also, `eyed3.plugins.LoaderPlugin` can optionally cache the loaded audio file objects for each call-back to `handleDirectory`.
- [classic plugin] New `-remove-frame` option.
- [statistics plugin] More accurate values and easier to extend.

Bug fixes:

- Fixed a very old bug where certain values of 0 would be written to the tag as “ instead of ‘x00’.
- [issue 6] Don’t crash on malformed (invalid) UFID frames.
- Handle timestamps that are terminated with ‘Z’ to show the time is UTC.
- Conversions between ID3 v2.3 and v2.4 date frames fixed.
- [classic plugin] Use the system text encoding (locale) when converting lyrics files to Unicode.

0.7.0 - 11.15.2012 (Be Quiet and Drive)

Warning: This release is **NOT** API compatible with 0.6.x. The majority of the command line interface has been preserved although many options have either changed or been removed.

New Features:

- Command line script `eyeD3` now supports plugins. The default plugin is the classic interface for tag reading and editing.
- Plugins for writing NFO files, displaying lame/xing headers, jabber tunes, and library statistics.
- Module name is now `eyed3` (all lower case) to be more standards conforming.
- New `eyed3.id3.Tag` interface based on properties.
- Improved ID3 date frame support and 2.3<->2.4 conversion, and better conversions, in general.
- Native support for many more ID3 frame types.
- Python Package Index friendly, and installable with 'pip'.
- Improved mime-type detection.
- Improved unicode support.
- Support for config files to contain common options for the command-line tool.

0.6.18 - 11.25.2011 (Nobunny loves you)

New features:

- Support for disc number frames (TPOS). Thanks to Nathaniel Clark <nate@misrule.us>
- Added %Y (year) and %G (genre) substitution variables for file renames. Thanks to Otávio Pontes <otaviobp@gmail.com>
- Improved XML (-jep-118) escaping and a new option (-rfc822) to output in RFC 822 format. Thanks to Neil Schemenauer <nas@arctrix.com>
- -rename will NOT clobber existing files.
- New option -itunes to write only iTunes accepted genres. Thanks to Ben Isaacs <Ben Xome@ben-xo.com>
- If available the 'magic' module will be used to determine mimetypes when the filename is not enough. Thanks to Ville Skyttä <ville.skytta@iki.fi>
- -set-encoding can be used along with a version conversion arg to apply a new encoding to the new tag.
- Increased performance for mp3 header search when malformed GEOB frames are encountered. Thanks to Stephen Fairchild <sfairchild@bethere.co.uk>
- Less crashing when invalid user text frames are encountered.
- Less crashing when invalid BPM values (empty/non-numeric) are encountered.

0.6.17 - 02.01.2009 (The Point of No Return)

Bug fixes:

- Workaround invalid utf16
- Show all genres during -list-genres
- Workaround invalid PLCT frames.
- Show all tracks during -nfo output.

New features:

- Support for URL frames (W??? and WXXX)
- Program exit code for the 'eyeD3' command line tool

0.6.16 - 06.09.2008 (Gimme Danger)**Bug fixes:**

- Typo fix of sysnc/unsync data. Thanks to Gergan Penkov <gergan@gmail.com>
- Infinite loop fix when dealing with malformed APIC frames.
- Tag.removeUserTextFrame helper. Thanks to David Grant <davidgrant@gmail.com>

0.6.15 - 03.02.2008 (Doin' The Cockroach)**Bug fixes:**

- ID3 v1 comment encoding (latin1) bug fix (Renaud Saint-Gratien <rsg@nerim.net>)
- APIC picture type fix (Michael Schout <mschout@gkg.net>)
- Fixed console Unicode encoding for display.
- Fixed frame de-unsynchronization bugs.
- Round float BPMs to int (per the spec)

0.6.14 - 05.08.2007 (Breakthrough)**Bugs fixes:**

- Fixed a nasty corruption of the first mp3 header when writing to files that do not already contain a tag.
- Fixed a bug that would duplicate TYER frames when setting new values.
- Fixed the reading/validation of some odd (i.e.,rare) mp3 headers

New Features:

- Encoding info extracted from Lame mp3 headers [Todd Zullinger]
- Genre names will now support '!' to allow for genres like "Rock!Punk!Pop-Punk" and '!' for "Oi!"

0.6.13 - 04.30.2007 (Undercovers On)

- Numerous write fixes, especially for v2.4 tags. Thanks to Alexander Thomas <dr-lex@dr-lex.34sp.com> for finding these.
- Add `--no-zero-padding` option to allow disabling of zero padding track numbers
- Add `--nfo` option to output NFO format files about music directories.
- Time computation fixes when MP3 frames headers were mistakenly found.

0.6.12 - 02.18.2007 (Rid Of Me)

- Handle Mac style line ending in lyrics and display with the proper output encoding. [Todd Zullinger]
- TDTG support and other date frame fixes. [Todd Zullinger]
- Output encoding bug fixes. [Todd Zullinger]

0.6.11 - 11.05.2006 (Disintegration)

- Support for GEOB (General encapsulated object) frames from Aaron VonderHaar <gruen0aermel@gmail.com>
- Decreased memory consumption during tag rewrites/removals.
- Allow the “reserved” mpeg version bits when not in strict mode.
- Solaris packages available via Blastwave - <http://www.blastwave.org/packages.php/pyeyed3>

0.6.10 - 03.19.2006 (Teh Mesk release)

- Unsynchronized lyrics (USLT) frame support [Todd Zullinger <tmz@pobox.com>]
- UTF16 bug fixes
- More forgiving of invalid User URL frames (WXXX)
- RPM spec file fixes [Knight Walker <kwalker@kobran.org>]
- More details in `-verbose` display

0.6.9 - 01.08.2005 (The Broken Social Scene Release)

- eyeD3 (the CLI) processes directories more efficiently
- A specific file system encoding can be specified for file renaming, see `-fs-encoding` (Andrew de Quincey)
- Faster mp3 header search for empty and/or corrupt mp3 files
- Extended header fixes
- Bug fix for saving files with no current tag
- What would a release be without unicode fixes, this time it's unicode filename output and JEP 0118 output.

0.6.8 - 08.29.2005 (The Anal Cunt Release)

- Frame header size bug. A `_serious_` bug since writes MAY be affected (note: I've had no problems reported so far).

0.6.7 - 08.28.2005 (The Autopsy Release)

- Beats per minute (TPBM) interface
- Publisher/label (TPUB) interface
- When not in strict mode exceptions for invalid tags are quelled more often
- Support for iTunes ID3 spec violations regarding multiple APIC frames

- Bug fix where lang in CommentFrame was unicode where it MUST be ascii
- Bug fixed for v2.2 frame header sizes
- Bug fixed for v2.2 PIC frames
- File rename bug fixes
- Added -c option as an alias for -comment
- -i/-write-images now takes a destination path arg. Due to optparse non-support for optional arguments the path MUST be specified. This option no longer clobbers existing files.

0.6.6 - 05.15.2005 (The Electric Wizard Release)

- APIC frames can now be removed.
- An interface for TBPM (beats per minute) frames.
- Utf-16 bug fixes and better unicode display/output
- RPM spec file fixes

0.6.5 - 04.16.2005

- Read-only support for ID3 v2.2
- TPOS frame support (disc number in set).
- Bug fixes

0.6.4 - 02.05.2005

- Native support for play count (PCNT), and unique file id (UFID) frames.
- More relaxed genre processing.
- Sync-safe bug fixed when the tag header requests sync-safety and not the frames themselves.
- configure should successfully detect python release candidates and betas.

0.6.3 - 11.23.2004

- Much better unicode support when writing to the tag.
- Added Tag.setEncoding (-set-encoding) and -force-update
- Handle MP3 frames that violate spec when in non-strict mode. (Henning Kiel <henning.kiel@rwth-aachen.de>)
- Fix for Debian bug report #270964
- Various bug fixes.

0.6.2 - 8.29.2004 (Happy Birthday Mom!)

- TagFile.rename and Tag.tagToString (eyeD3 `--rename=PATTERN`). The latter supports substitution of tag values: %A is artist, %t is title, %a is album, %n is track number, and %N is track total.
- eyeD3 man page.
- User text frame (TXXX) API and `--set-user-text-frame`.
- Python 2.2/Optik compatibility works now.
- ebuild for Gentoo (<http://eyed3.nicfit.net/releases/gentoo/>)

0.6.1 - 5/14/2004 (Oz/2 Ohh my!)

- Unicode support - UTF-8, UTF-16, and UTF-16BE
- Adding images (APIC frames) is supported (`--add-image`, `Tag.addImage()`, etc.)
- Added a `--relaxed` option to be much more forgiving about tags that violate the spec. Quite useful for removing such tags.
- Added `Tag.setTextFrame` (`--set-text-frame=FID:TEXT`)
- Added `--remove-comments`.
- Now requires Python 2.3. Sorry, but I like cutting-edge python features.
- Better handling and conversion (2.3 <=> 2.4) of the multiple date frames.
- Output format per JEP 0118: User Tune, excluding xsd:duration format for `<length/>` (<http://www.jabber.org/jeps/jep-0118.html>)
- Lot's of bug fixes.
- Added a mailing list. Subscribe by sending a message to eyed3-devel-subscribe@nicfit.net

0.5.1 - 7/17/2003 (It's Too Damn Hot to Paint Release)

- Temporary files created during ID3 saving are now properly cleaned up.
- Fixed a "bug" when date frames are present but contain empty strings.
- Added a `--no-color` option to the eyeD3 driver.
- Workaround invalid tag sizes by implied padding.
- Updated README

0.5.0 - 6/7/2003 (The Long Time Coming Release)

- ID3 v2.x saving.
- The eyeD3 driver/sample program is much more complete, allowing for most common tag operations such as tag display, editing, removal, etc. Optik is required to use this program. See the README.
- Complete access to all artist and title frames (i.e. TPE* and TIT*)
- Full v2.4 date support (i.e. TDRC).
- Case insensitive genres and compression fixes. (Gary Shao)
- ExtendedHeader support, including CRC checksums.

- Frame groups now supported.
- Syncsafe integer conversion bug fixes.
- Bug fixes related to data length indicator bytes.
- Genre and lot's of other bug fixes.

0.4.0 - 11/11/2002 (The Anniversary Release)

- Added the ability to save tags in ID v1.x format, including when the linked file was IDv2. Original backups are created by default for the time being. . .
- Added deleting of v1 and v2 frames from the file.
- Zlib frame data decompression is now working.
- bin/eyeD3 now displays user text frames, mp3 copyright and originality, URLs, all comments, and images. Using the `-write-images` arg will write each APIC image data to disk.
- Added `eyeD3.isMp3File()`, `Tag.clear()`, `Tag.getImages()`, `Tag.getURLs()`, `Tag.getCDID()`, `FrameSet.removeFrame()`, `Tag.save()`, `ImageFrame.writeFile()`, etc. . .
- Modified bin/eyeD3 to grok non Mp3 files. This allows testing with files containing only tag data and lays some groundwork for future OGG support.
- Fixed ImageFrame mime type problem.
- Fixed picture type scoping problems.

0.3.1 - 10/24/2002

- RPM packages added.
- Fixed a bug related to ID3 v1.1 track numbers. (Aubin Paul)
- Mp3AudioFile matches `*.mp3` and `*.MP3`. (Aubin Paul)

0.3.0 - 10/21/2002

- Added a higher level class called Mp3AudioFile.
- MP3 frame (including Xing) decoding for obtaining bit rate, play time, etc.
- Added APIC frame support (`eyeD3.frames.Image`).
- BUG FIX: Tag unsynchronization and deunsynchronization now works correctly and is ID3 v2.4 compliant.
- Tags can be linked with file names or file objects.
- More tag structure abstractions (`TagHeader`, `Frame`, `FrameSet`, etc.).
- BUG FIX: GenreExceptions were not being caught in eyeD3 driver.

0.2.0 - 8/15/2002

- ID3_Tag was renamed to Tag.
- Added Genre and GenreMap (`eyeD3.genres` is defined as the latter type)
- Added support of ID3 v1 and v2 comments.

- The ID3v2Frame file was renamed ID3v2 and refactoring work has started with the addition of TagHeader.

0.1.0 - 7/31/2002

- Initial release.

4.3 ChangeLog

Changes made to eyeD3 and the project's release history can be found in the *Release History*.
