
Falkland CMS Documentation

Release 0.2.0

Snooty Monkey, LLC

January 04, 2015

| | | |
|----------|------------------------|----------|
| 1 | Request Headers | 3 |
| 1.1 | API Security | 3 |
| 1.2 | Resources | 3 |

This is the documentation for using the Falkland CMS Hypermedia (REST) API.

Falkland CMS supports a Hypermedia (RESTful) API that can be used from any programming language to access all the capabilities of Falkland CMS.

The intent of this API is to be a true [REST API](#) in the full-fledged [Roy Fielding, HATEOAS](#) style. You can help with that by pointing out anything you perceive as a deviation.

Note: The example API calls in this documentation are provided in [cURL](#). When exploring the API feel free to use [cURL](#), the HTTP client of your choice, or the programming language you're most comfortable in. It should be simple to convert the [cURL](#) example to your own preferred HTTP client.

Request Headers

Provide the custom [Internet media type](#) (formerly MIME type) saying you want Falkland CMS [JSON](#) data and the version of the API you are using in the header of your API requests.

Accept: application/vnd.fcms.{**type**}+json;version=**version**

Example: Accept: aapplication/vnd.fcms.item+json;version=1

The version of the API resource you want is determined by the Accept header that you pass in the request. If no version is provided, it is assumed you want the latest version.

1.1 API Security

1.1.1 Authentication

TBD.

1.1.2 Sessions

1.1.3 Access Control

TBD.

1.2 Resources

These resources are available in Falkland CMS:

1.2.1 Collections

A [collection](#) is a logical grouping of items to be managed together. A collection also has zero or more taxonomies that define hierarchical organizational structures for the items in the collection.

Some examples of collection:

- Secondary sources about Albert Camus' works for Camus.org
- Everything there is on the Internet about mudskippers for Mudskippers.org

- All the books in Jack Freeman's Library
- Everything published about amoralism for nil.org
- All Atari 7800 games for 8-bit.com
- Collected Buccaneer quotes for pitifulpirates.com

List Collections

List all the collections in the system.

Request

GET /

Headers

- **Accept:** application/vnd.fcms.collection+json;version=1
- **Accept-Charset:** utf-8

Example

```
curl -i --header "Accept: application/vnd.fcms.collection+json;version=1" --header "Accept-Charset: u
```

Response

The response has a JSON array called collections which contains each collection in the system. The response also contains a link for creating new collections.

Status

- **200:** OK

Example

```
{
  "collections": [
    {
      "name": "Mudskippers",
      "created_at": "2013-04-23T14:30:50Z",
      "updated_at": "2013-04-23T14:30:50Z",
      "links": [
        {
          "rel": "self",
          "method": "get",
          "href": "/mudskippers",
          "type": "application/vnd.fcms.collection+json;version=1"
        },
        {
          "rel": "contains",
          "method": "get",
          "href": "/mudskippers/"
        }
      ]
    }
  ]
}
```

```

        "type": "application/vnd.fcms.item+json;version=1"
    },
    {
        "rel": "create",
        "method": "post",
        "href": "/mudskippers/",
        "type": "application/vnd.fcms.item+json;version=1"
    },
    {
        "rel": "update",
        "method": "put",
        "href": "/mudskippers",
        "type": "application/vnd.fcms.collection+json;version=1"
    },
    {
        "rel": "delete",
        "method": "delete",
        "href": "/mudskippers",
    },
    {
        "rel": "taxonomy",
        "method": "get",
        "href": "/mudskippers/media-types",
        "type": "application/vnd.fcms.taxonomy+json;version=1"
    },
    {
        "rel": "taxonomy",
        "method": "get",
        "href": "/mudskippers/topics",
        "type": "application/vnd.fcms.taxonomy+json;version=1"
    }
]
},
{

    },
    {
        "rel": "taxonomy",
        "method": "get",
        "href": "/camus/issues",
        "type": "application/vnd.fcms.taxonomy+json;version=1"
    },
    {
        "rel": "taxonomy",
        "method": "get",
        "href": "/camus/geography",
        "type": "application/vnd.fcms.taxonomy+json;version=1"
    }
    ]
}
],
"links": [
    {
        "rel": "create",
        "method": "post",
        "href": "/",
        "type": "application/vnd.fcms.collection+json;version=1"
    }
]
}
```

Get a Collection

Get a particular collection.

Request

GET /:collection-slug

Warning: The lack of a trailing slash after the slug is important.

Headers

- **Accept:** application/vnd.fcms.collection+json;version=1

- **Accept-Charset:** utf-8

Example

```
curl -i --header "Accept: application/vnd.fcms.collection+json;version=1" --header "Accept-Charset: utf-8"
```

Response

The response has a complete JSON representation of the collection which contains links to available actions on the collection, and links to any taxonomies associated with the collection.

Status

- **200:** OK
- **404:** the collection was not found

Example

```
{
  "name": "Mudskippers",
  "created_at": "2013-04-23T14:30:50Z",
  "updated_at": "2013-04-23T14:30:50Z",
  "slug": "mudskippers",
  "description": "The Internet's best resources on the Mudskipper",
  "links": [
    {
      "rel": "self",
      "method": "get",
      "href": "/mudskippers",
      "type": "application/vnd.fcms.collection+json;version=1"
    },
    {
      "rel": "contains",
      "method": "get",
      "href": "/mudskippers/",
      "type": "application/vnd.fcms.item+json;version=1"
    },
    {
      "rel": "create",
      "method": "post",
      "href": "/mudskippers/",
      "type": "application/vnd.fcms.item+json;version=1"
    },
    {
      "rel": "update",
      "method": "put",
      "href": "/mudskippers",
      "type": "application/vnd.fcms.collection+json;version=1"
    },
    {
      "rel": "delete",
      "method": "delete",
      "href": "/mudskippers",
    },
    {

```

```
    "rel": "taxonomy",
    "method": "get",
    "href": "/mudskippers/media-types",
    "type": "application/vnd.fcms.taxonomy+json;version=1"
  },
  {
    "rel": "taxonomy",
    "method": "get",
    "href": "/mudskippers/topics",
    "type": "application/vnd.fcms.taxonomy+json;version=1"
  }
]
}
```

Create a Collection

Create a new collection in the system.

Request

POST /

Parameters Pass in details for the new collection as a JSON representation. The name is required and will be used to create the slug if no slug is provided.

Here is a minimal representation of a JSON body:

```
{
  "name": "Mudskippers"
}
```

Here is a more complete representation of a JSON body:

```
{
  "name": "Mudskippers",
  "taxonomy": "/mudskippers/media-types",
  "taxonomy": "/mudskippers/topics",
  "description": "The Internet's best resources on the Mudskipper"
}
```

Headers

- **Accept:** application/vnd.fcms.collection+json;version=1
- **Accept-Charset:** utf-8
- **Content-type:** application/vnd.fcms.collection+json;version=1

Example

```
curl -i --header "Accept: application/vnd.fcms.collection+json;version=1" --header "Accept-Charset: u
```

Response

The new collection is at the location provided in the location in the header. A representation of the new collection is also returned.

Status

- **201:** created
- **422:** the collection entity you passed in is not valid

Headers

- **Location:** the URL of the newly created collection

Example

```
{
  "name": "Mudskippers",
  "created_at": "2013-04-23T14:30:50Z",
  "updated_at": "2013-04-23T14:30:50Z",
  "slug": "mudskippers",
  "description": "The Internet's best resources on the Mudskipper",
  "links": [
    {
      "rel": "self",
      "method": "get",
      "href": "/mudskippers",
      "type": "application/vnd.fcms.collection+json;version=1"
    },
    {
      "rel": "contains",
      "method": "get",
      "href": "/mudskippers/",
      "type": "application/vnd.fcms.item+json;version=1"
    },
    {
      "rel": "create",
      "method": "post",
      "href": "/mudskippers/",
      "type": "application/vnd.fcms.item+json;version=1"
    },
    {
      "rel": "update",
      "method": "put",
      "href": "/mudskippers",
      "type": "application/vnd.fcms.collection+json;version=1"
    },
    {
      "rel": "delete",
      "method": "delete",
      "href": "/mudskippers",
    },
    {
      "rel": "taxonomy",
      "method": "get",
      "href": "/mudskippers/media-types",
    }
  ]
}
```

```
    "type": "application/vnd.fcms.taxonomy+json;version=1"
  },
  {
    "rel": "taxonomy",
    "method": "get",
    "href": "/mudskippers/topics",
    "type": "application/vnd.fcms.taxonomy+json;version=1"
  }
]
}
```

Update a Collection

Update an existing collection.

Request

PUT `/:collection-slug`

Parameters Pass in details for the updated collection as a JSON representation. The name is required.

If no slug is provided in the JSON representation, the existing slug will be used.

```
{
  "name": "Mudskipper",
  "slug": "mudskipper-info",
  "taxonomy": "/mudskippers/topics",
  "description": "The world's best resources on the Mudskipper"
}
```

Note: Provide a new slug in the JSON body to move a collection.

Headers

- **Accept:** `application/vnd.fcms.collection+json;version=1`
- **Accept-Charset:** `utf-8`
- **Content-type:** `application/vnd.fcms.collection+json;version=1`

Example

```
curl -i --header "Accept: application/vnd.fcms.collection+json;version=1" --header "Accept-Charset: utf-8"
```

Response

The representation of the updated collection is at the specified location, which is echoed in the location in the header. A representation of the updated collection is also returned.

Status

- **200:** update successful
- **404:** the collection is not found
- **422:** the item entity you passed in is not valid

Example

```
{
  "name": "Mudskippers",
  "created_at": "2013-04-23T14:30:50Z",
  "updated_at": "2013-04-23T14:30:50Z",
  "slug": "mudskipper-info",
  "description": "The world's best resources on the Mudskipper",
  "links": [
    {
      "rel": "self",
      "method": "get",
      "href": "/mudskipper-info",
      "type": "application/vnd.fcms.collection+json;version=1"
    },
    {
      "rel": "contains",
      "method": "get",
      "href": "/mudskippers/",
      "type": "application/vnd.fcms.item+json;version=1"
    },
    {
      "rel": "create",
      "method": "post",
      "href": "/mudskippers/",
      "type": "application/vnd.fcms.item+json;version=1"
    },
    {
      "rel": "update",
      "method": "put",
      "href": "/mudskipper-info",
      "type": "application/vnd.fcms.collection+json;version=1"
    },
    {
      "rel": "delete",
      "method": "delete",
      "href": "/mudskipper-info",
    },
    {
      "rel": "taxonomy",
      "method": "get",
      "href": "/mudskipper-info/media-types",
      "type": "application/vnd.fcms.taxonomy+json;version=1"
    },
    {
      "rel": "taxonomy",
      "method": "get",
      "href": "/mudskipper-info/topics",
      "type": "application/vnd.fcms.taxonomy+json;version=1"
    }
  ]
}
```

Delete a Collection

Delete an existing collection.

Request

```
DELETE /:collection-slug
```

Example

```
curl -i -X DELETE http://{host:port}/mudskippers
```

Response

There is no response body, just a status.

Status

- **204**: deleted
- **404**: collection was not found

1.2.2 Items

An **item** is a single reference entry in a collection. An item is referential. It's not itself **the** member of the collection, but is a pointer **to** the member of the collection. It's not **the** article on Faulkner's early history with bedwetting, it's a pointer **to** the article.

With Falkland CMS, you capture items in a collection and categorize them into multiple orthogonal taxonomies. Items can point to literally anything in the world: books, articles, web pages, videos, art, artifacts, quotes, collectables, et cetera. An item is simply anything in a collection that is big enough to warrant spending the time to organize the collection. Once created, items can be browsed and searched, and can be displayed in exhibits.

Some examples of items:

- an item for the Dracula VIC-20 cartridge for vic20.com
- an item for a journal article about *The Fall* for Camus.org
- an item for a book, *The Fall*, in Jack Freeman's Library
- an item for a Youtube video about mudskippers for Mudskippers.org
- an item for the wikipedia entry on amoralism for nil.org
- an item for the definition of the acronym PC for Falklandsophile.com
- an item for a John McKay quote for pitifulpirates.com

List Items

List all the items in a collection.

Request

```
GET /:collection-slug/?num=50&start=200
```

Warning: The trailing slash after the collection slug is important and must be included in the request.

Parameters

- **num:** how many items to return, optional, defaults to 50
- **start:** 0-based index of the 1st item to return, optional, defaults to 0

Headers

- **Accept:** application/vnd.collection+vnd.fcms.item+json;version=1
- **Accept-Charset:** utf-8

Example

```
curl -i --header "Accept: application/vnd.collection+vnd.fcms.item+json;version=1" --header "Accept-Charset: utf-8"
```

```
curl -i --header "Accept: application/vnd.collection+vnd.fcms.item+json;version=1" --header "Accept-Charset: utf-8"
```

```
curl -i --header "Accept: application/vnd.collection+vnd.fcms.item+json;version=1" --header "Accept-Charset: utf-8"
```

Response

The response is a [Collection+JSON](#) collection hash (not to be confused with an FCMS collection) which contains an array called items with each item in the collection. The collection hash contains an array of links for creating new items in the collection and for pagination. The collection hash also contains a template in [JSON Schema](#) format for creating new items in the collection.

Status

- **200:** OK
- **404:** collection was not found

Example

```
{
  "collection": {
    "version": "1.0",
    "href": "/mudskippers?num=2&start=4",
    "links": [
      {
        "rel": "create",
        "method": "post",
        "href": "/mudskippers",
        "type": "application/vnd.fcms.item+json;version=1"
      },
      {
        "rel": "first",
```

```
    "method": "get",
    "href": "/mudskippers?num=2",
    "type": "application/vnd.fcms.item+json;version=1"
  },
  {
    "rel": "prev",
    "method": "get",
    "href": "/mudskippers?num=2&start=2",
    "type": "application/vnd.fcms.item+json;version=1"
  },
  {
    "rel": "next",
    "method": "get",
    "href": "/mudskippers?num=2&start=6",
    "type": "application/vnd.fcms.item+json;version=1"
  }
],
"items": [
  {

}
```

Get an Item

Get a particular item.

Request

```
GET /:collection-slug/:item-slug
```

Headers

- **Accept:** application/vnd.fcms.item+json;version=1
- **Accept-Charset:** utf-8

Example

```
curl -i --header "Accept: application/vnd.fcms.item+json;version=1" --header "Accept-Charset: utf-8"
```

Response

The response has a complete JSON representation of the item which contains links to available actions on the item, a reverse link to the collection containing the item, and links to any categories the item is a member of.

Status

- **200:** OK
- **404:** collection or item was not found

Example

```
{
  "slug": "amazing-animals-mudskipper",
  "collection": "mudskippers",
  "created_at": "2013-04-23T14:30:50Z",
  "updated_at": "2013-04-23T14:30:50Z",
  "version": "1",

  "method": "get",
  "href": "/mudskippers",
  "type": "application/vnd.fcms.collection+json;version=1"
}
]
```

Create an Item

Create a new item in a collection.

Request

POST `/:collection-slug`

Parameters Pass in details for the new item as a JSON representation. The name is required and will be used to create the slug.

Here is a minimal representation of a JSON body:

```
{
  "name": "Mudskipper",
  "URL": "http://en.wikipedia.org/wiki/Mudskipper"
}
```

Here is a more complete representation of a JSON body:

```
{
  "name": "Mudskipper",
  "URL": "http://en.wikipedia.org/wiki/Mudskipper",
  "categories": [
    "/mudskippers/media-types/articles/online",
    "/mudskippers/topics/general"
  ],
  "description": "Mudskipper entry from Wikipedia, the free encyclopedia"
}
```

Headers

- **Accept:** application/vnd.fcms.item+json;version=1
- **Accept-Charset:** utf-8
- **Content-type:** application/vnd.fcms.item+json;version=1

Example

```
curl -i --header "Accept: application/vnd.fcms.item+json;version=1" --header "Accept-Charset: utf-8"
```

Response

The new item is at the location provided in the location in the header. A representation of the new item is also returned.

Status

- **201:** created
- **404:** the collection is not found
- **422:** the item entity you passed in is not valid

Headers

- **Location:** the URL of the newly created item

Example

```
{
  "name": "Mudskipper",
  "URL": "http://en.wikipedia.org/wiki/Mudskipper",
  "created_at": "2013-04-23T14:30:50Z",
  "updated_at": "2013-04-23T14:30:50Z",
  "slug": "wiki-mudskipper",
  "collection": "mudskippers",
  "description": "Mudskipper entry from Wikipedia, the free encyclopedia",
  "links": [
    {
      "rel": "self",
      "method": "get",
      "href": "/mudskippers/wikipedia-mudskipper",
      "type": "application/vnd.fcms.item+json;version=1"
    }
  ],
}
```

```
{
  "rel": "update",
  "method": "put",
  "href": "/mudskippers/wikipedia-mudskipper",
  "type": "application/vnd.fcms.item+json;version=1"
},
{
  "rel": "delete",
  "method": "delete",
  "href": "/mudskippers/wikipedia-mudskipper",
},
{
  "rel": "category",
  "method": "get",
  "href": "/mudskippers/media-types/articles/online",
  "type": "application/vnd.fcms.category+json;version=1"
},
{
  "rel": "category",
  "method": "get",
  "href": "/mudskippers/topics/general",
  "type": "application/vnd.fcms.category+json;version=1"
},
{
  "rev": "collection",
  "method": "get",
  "href": "/mudskippers",
  "type": "application/vnd.fcms.collection+json;version=1"
}
]
}
```

Update an Item

Update an existing item.

Request

PUT `/:collection-slug/:item-slug`

Parameters Pass in details for the updated item as a JSON representation. The name is required.

If no slug is provided in the JSON representation, the existing slug will be used.

```
{
  "name": "Mudskipper",
  "slug": "wiki-mud",
  "URL": "http://en.wikipedia.org/wiki/Mudskipper",
  "categories": [
    "/mudskippers/topics/general"
  ]
  "description": "Mudskipper entry from Wikipedia, the free encyclopedia"
}
```

Note: Provide a new slug in the JSON body to move an item.

Headers

- **Accept:** application/vnd.fcms.item+json;version=1
- **Accept-Charset:** utf-8
- **Content-type:** application/vnd.fcms.item+json;version=1

Example

```
curl -i --header "Accept: application/vnd.fcms.item+json;version=1" --header "Accept-Charset: utf-8"
```

Response

The representation of the updated item is at the specified location, which is echoed in the location in the header. A representation of the updated item is also returned.

Status

- **200:** update successful
- **404:** the collection, taxonomy or category is not found
- **422:** the item entity you passed in is not valid

Headers

- **Location:** the URL of the newly created item

Examples

```
{
  "name": "Amazing animals - Mudskipper",
  "URL": "http://www.youtube.com/watch?v=mJhUKzEq47U",
  "created_at": "2013-04-23T14:30:50Z",
  "updated_at": "2013-04-23T14:30:50Z",
  "slug": "amazing-animals-mudskipper",
  "collection": "mudskippers",
  "description": "Excerpt from David Attenborough's BBC Life series episode 04",
  "links": [
    {
      "rel": "self",
      "method": "get",
      "href": "/mudskippers/amazing-animals-mudskipper"
    },
    {
      "rel": "update",
      "method": "put",
      "href": "/mudskippers/amazing-animals-mudskipper"
    },
    {
      "rel": "delete",

```

```
    "method": "delete",
    "href": "/mudskippers/amazing-animals-mudskipper",
  },
  {
    "rel": "category",
    "method": "get",
    "href": "/mudskippers/media-types/videos/online",
    "type": "application/vnd.fcms.category+json;version=1"
  },
  {
    "rel": "category",
    "method": "get",
    "href": "/mudskippers/topics/reproduction",
    "type": "application/vnd.fcms.category+json;version=1"
  },
  {
    "rev": "collection",
    "method": "get",
    "href": "/mudskippers",
    "type": "application/vnd.fcms.collection+json;version=1"
  }
]
}
```

Delete an Item

Delete an existing item.

Request

```
DELETE /:collection-slug/:item-slug
```

Example

```
curl -i -X DELETE http://{host:port}/mudskippers/amazing-animals-mudskipper
```

Response

There is no response body, just a status.

Status

- **204:** deleted
- **404:** collection or item was not found

1.2.3 Taxonomies

A *taxonomy* is a hierarchical classification of items in a collection. A taxonomy is made up of a tree of categories from the more general at the root of the taxonomy to the more specific at the leaves of the taxonomy. Here is a simple abbreviated example of a taxonomy of US locations:

In the example the taxonomy is called “Location” and it consists of categories such as “Continental US” and “Florida”.

An item classified in a category in a taxonomy is a member of that category and all of that category’s parents. As an illustrative example, imagine an item, “Mecklenburg Declaration of Independence”, classified with the category “North Carolina”. It’s also a member of “South East”, “Continental US” and the “Location” taxonomy as a whole.

With Falkland CMS, it is typical to have multiple orthogonal taxonomies categorizing the items in a collection.

In addition to being classified in multiple different taxonomies, items can also be categorized in more than 1 category in the same taxonomy. In fact, as has been pointed out above, it is rare for items to be categorized in just one category in a taxonomy since they are members of their categories’ parent categories as well.

Categories have a slug and a path. The category slug must follow all the standard rules for slugs in Falkland-CMS and must be unique to all other categories *at the same level and location in the same taxonomy*. The path to a category is made up of the collection, the taxonomy slug, all the parent slugs and finally the category slug. In our sample taxonomy for example, the slug for the “North Carolina” category is “north-carolina” and the path is:

`/founding-documents/location/continental-us/south-east/north-carolina/`

Listing items at the path above means the “Mecklenburg Declaration of Independence” will be listed since it is classified in the “North Carolina” category, and listing the items in the following paths would also include the “Mecklenburg Declaration of Independence”:

- `/founding-documents/location/continental-us/south-east/`
- `/founding-documents/location/continental-us/`
- `/founding-documents/location/`
- `/founding-documents/`

Some examples of taxonomies:

- type of media
- type of document
- geographic location
- topic
- time period
- biological classification
- chemical classification
- Dewey Decimal Classification
- folk taxonomies

There is an extensive [list of taxonomies](#) at the Taxonomy Warehouse.

The categories in a taxonomy are represented as name/value pairs with the name being the category slug and the value being the category name. The structure of the taxonomy is represented as name/value pairs with the name being the word “categories” and the value being an array of categories.

Here is a fragmentary example of the JSON representation of the sample taxonomy depicted above:

```
{
  "name": "Location",
  "slug": "location",
  "collection": "founding-documents",
  "description": "US Location",
  "categories": [
    { "continental-us": "Continental US", "categories": [
      { "north-east": "North East" },
      { "south-east": "South East", "categories": [
        { "florida": "Florida" },
        { "georgia": "Georgia" },
        { "north-carolina": "North Carolina" },
        { "south-carolina": "South Carolina" },
        { "tennessee": "Tennessee" },
        { "alabama": "Alabama" }
      ] }
    ] },
    { "midwest": "Midwest" },
    { "south": "South" },
    { "southwest": "Southwest" },
    { "west": "West" } ] },
    { "non-continental-us": "Outiside Continental US" }
  ]
}
```

Here is complete example of the entire JSON representation of a taxonomy:

```
{
  "name": "Topics",
  "created_at": "2013-06-23T05:30:50Z",
  "updated_at": "2013-06-23T05:30:50Z",
  "slug": "topics",
  "collection": "falkland-islands",
  "description": "",
  "categories": [
    { "natural-history": "Natural History", "categories": [
      { "flora": "Flora" },
      { "insects": "Insects" },
    ] }
  ]
}
```

```

    {"fishes": "Fishes"},
    {"birds": "Birds", "categories": [

```

List Taxonomies

List all the taxonomies in a collection.

TODO

Get a Taxonomy

Get a particular taxonomy.

Request

```
GET /:collection-slug/:taxonomy-slug
```

Headers

- **Accept:** application/vnd.fcms.taxonomy+json;version=1
- **Accept-Charset:** utf-8

Example

```
curl -i --header "Accept: application/vnd.fcms.taxonomy+json;version=1" --header "Accept-Charset: utf-8"
```

Response

The response has a complete JSON representation of the taxonomy which contains the hierarchical structure of the categories in the taxonomy, links to available actions on the taxonomy, a reverse link to the collection containing the taxonomy, and links to listings items categorized in the taxonomy.

Status

- **200:** OK
- **404:** collection or taxonomy was not found

Example

```
{
  "name": "Location",
  "created_at": "2013-08-14T05:43:07Z",
  "updated_at": "2013-08-14T05:43:07Z",
  "slug": "location",
  "collection": "founding-documents",
  "description": "US Location",
  "categories": [
    {
      "continental-us": "Continental US",
      "categories": [
        {
          "north-east": "North East",
          "south-east": "South East",
          "categories": [
            {
              "florida": "Florida",

TODO

Update a Taxonomy

Update an existing taxonomy.

TODO

Delete a Taxonomy

Delete an existing taxonomy.

Request

```
DELETE /:collection-slug/:taxonomy-slug
```

Example

```
curl -i -X DELETE http://{host:port}/founding-documents/location
```

Response

There is no response body, just a status.

Status

- **204:** deleted
- **404:** collection or taxonomy was not found
- **Collection:** a group of curated items, a Falkland CMS system can have one or more collections
- **Item:** a single entry in a collection. An item is not itself THE member of the collection, but is a pointer TO the member of the collection.
- **Taxonomy:** - a hierarchical categorization of items in a collection, collections typically have multiple independent taxonomies

1.2.4 Slugs

Each of these resources has a slug that's used when referring to the resource in a URL. A slug is just a unique identifier that's suitable for use in a URL. Slugs in Falkland CMS are:

- alphanumeric (no white space, unicode or special characters)
- lower case
- internally separated by a single dash
- without a prefixed or trailing dash
- 256 characters or less

An example of a slug is: **the-amazing-amphibious-fish**

You don't need to be overly concerned about these rules as Falkland CMS always gives you the option of having the slug generated from the resource's name.

All items must have unique slugs that do not conflict with other items in the same collection since they operate in the same namespace: `/:collection-slug/:item-slug`

Similarly all taxonomies must have unique slugs that do not conflict with other taxonomies in the same collection since they operate in the same namespace: `/:collection-slug/:taxonomy-slug`

As you would expect, all collections must have unique slugs as well that do not conflict with other collections.

Category slugs are more flexible and only need to be unique with other categories at their same level in the same taxonomy. So the following examples where different categories share the same slug (“online” and “physical-media”) in the same taxonomy are perfectly fine:

- /mudskippers/type/video/physical-media
- /mudskippers/type/video/online
- /mudskippers/type/book/physical-media
- /mudskippers/type/book/online
