Contents:

Sometimes your Python script needs a drink. But it never turns out well.

- Free software: BSD license
- Documentation: <http://inebriate.rtfid.org>.

Inspired by a conversation with [Piper Merriam](#).

## 1.1 Features

- TODO

---

## Installation

---

At the command line:

```
$ easy_install inebrate
```

Or, if you have virtualenvwrapper installed:

```
$ mkvirtualenv inebrate  
$ pip install inebrate
```

---

**Usage**

---

To use inebriate in a project:

```
import inebriate
```

---

## Contributing

---

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

You can contribute in many ways:

### 4.1 Types of Contributions

#### 4.1.1 Report Bugs

Report bugs at <https://github.com/wlonk/inebriate/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### 4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

#### 4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

#### 4.1.4 Write Documentation

inebriate could always use more documentation, whether as part of the official inebriate docs, in docstrings, or even on the web in blog posts, articles, and such.

#### 4.1.5 Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/wlonk/inebriate/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 4.2 Get Started!

Ready to contribute? Here's how to set up *inebriate* for local development.

1. Fork the *inebriate* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/inebriate.git
```

3. Install your local copy into a virtualenv. Assuming you have `virtualenvwrapper` installed, this is how you set up your fork for local development:

```
$ mkvirtualenv inebriate
$ cd inebriate/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass `flake8` and the tests, including testing other Python versions with `tox`:

```
$ flake8 inebriate tests
$ python setup.py test
$ tox
```

To get `flake8` and `tox`, just `pip` install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## 4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in `README.rst`.
3. The pull request should work for Python 2.7, and 3.4, and for PyPy. Check [https://travis-ci.org/wlonk/inebriate/pull\\_requests](https://travis-ci.org/wlonk/inebriate/pull_requests) and make sure that the tests pass for all supported Python versions.

## 4.4 Tips

To run a subset of tests:

```
$ python -m unittest tests.test_inebriate
```

---

**Credits**

---

## 5.1 Inspiration

- Piper Merriam <aaronmerriam@gmail.com>

## 5.2 Development Lead

- Kit La Touche <kit@transneptune.net>

## 5.3 Contributors

None yet. Why not be the first?

---

**History**

---

**6.1 0.1.0 (2014-01-11)**

- First release on PyPI.

---

## Indices and tables
