ipydb Documentation

Release 0.0.2

Jay Sweeney

June 02, 2016

Contents

1 Indices and tables 3

ipydb is an IPython plugin for running SQL queries and viewing their results

Here's some asciicasts showing off some of ipydb's features.

1. Running queries, tab-completion and tab-expansions with the `%sql` command.

2) Schema browsing with `tables`, `fields`, `fks`, `relationships` and `describe`

Contents:

CHAPTER 1

Indices and tables

- genindex
- modindex
- search
