# **md2remark Documentation**

*Release 0.1.0*

**Patrick Ayoup**

August 30, 2014

md2remark is a tool to compile markdown files to remark.js presentations. The main aim of this package is to decouple the content from the html boilerplate around it.

Usage:

```
md2remark {source}
```

When source is a file, only that file is compiled. When it is a directory, all markdown files within it are compiled. All output is saved in a subdirectory of the current working directory called `md2remark_build`.
