
murl

Release 0.5.1

September 16, 2014

1	Getting Started	3
2	Usage	5
2.1	Creating a <code>Url</code> object	5
2.2	Mutating the <code>Url</code> object	5
2.3	List all attributes of a <code>Url</code> object	5
3	Objects	7
4	Changelog	9
4.1	0.5.1	9
4.2	0.5.0	9
5	Hacking	11
6	License	13

murl is a tiny wrapper for the Python module `urlparse`.

Build status

Getting Started

Install with **pip**:

```
$ pip install murl
```

or clone the latest version from [GitHub](#).

2.1 Creating a `Url` object

```
>>> from murl import Url
>>> url = Url('https://bugzilla.mozilla.org/show_bug.cgi?id=698201#c0')
>>> url
<Url: https://bugzilla.mozilla.org/show_bug.cgi?id=698201#c0>
```

2.2 Mutating the `Url` object

```
>>> url.scheme
'https'
>>> url.scheme = 'http'
>>> url.scheme
'http'
```

You can also change the *port* attribute if it is defined:

```
>>> url = Url('http://test.python.org:8080/foo/#top')
>>> url.port
8080
>>> url.port = 3000
>>> url.port
3000
```

2.3 List all attributes of a `Url` object

```
>>> dir(url)
['fragment', 'host', 'netloc', 'path', 'port', 'qs', 'querystring', 'scheme', 'url']
```

Objects

class `Url` (`url`[, `**parts`])

The `url` parameter should be a `str` object.

The `parts` dictionary should be one of them: `scheme`, `netloc`, `path`, `params`, `query`, `fragment`.

```
>>> url = murl.Url('http://www.google.com', path='about')
>>> url
<Url: http://www.google.com/about>
```

url

scheme

host

path

port

New in version 0.5.

querystring

qs

Return a dict of the current `querystring` attribute. For example:

```
>>> url = Url('http://example.com/berkerpeksag?s=1&a=0&b=berker')
>>> url.qs
{'a': ['0'], 's': ['1'], 'b': ['berker']}
```

fragment

__repr__ ()

New in version 0.4.

Changelog

4.1 0.5.1

Release date 2014-09-17

- Fix installation in Python 3.

4.2 0.5.0

Release date 2013-12-02

- Add a *port* attribute to the `Url`. (Contributed by Aaron Bassett)

Hacking

To setup a local development environment for hacking:

1. Clone the repo:

```
$ git clone https://github.com/berkerpeksag/murl.git  
$ cd murl
```

2. Create and activate a new virtual environment:

```
$ python3.4 -m venv <your_venv_name>  
$ . <your_venv_name>/bin/activate
```

3. Install required dependencies:

```
$ pip install -r requirements-dev.txt
```

4. To run the tests, do:

```
$ nosetests
```
