
python-party-pack Documentation

Release 1.0.0

Daniel Greenfeld

Sep 27, 2017

Contents

| | |
|-----------------------------|----------|
| 1 Reference: Party | 3 |
| 2 Indices and tables | 5 |
| Python Module Index | 7 |

Combining a basic yet fun Python project with Sphinx Docs, Coverage.py, and some other tools, plus some notes on good practices. This is a jump start to get involved with the party fun of Document Driven Development (DDD) and Test Driven Development (TDD).

Contents:

exception `party.DontHaveThatDrink`

This is thrown when someone asks for a drink not supplied.

exception `party.EveryoneHasPartyHat`

This is thrown when everyone has managed to get their hat on.

exception `party.OutOfThatDrink`

This is thrown when someone asks for a drink whose supply has been exhausted.

class `party.Party` (*attendees=None, **kwargs*)

A programmatic representation of a party. Accepts the following parameters:

- `attendees` (numeric)
- `beers` (numeric)
- `sangrias` (numeric)
- `wines` (numeric)
- `lemonades` (numeric)

Note: If you don't supply a value for any of the parameters, the Party will act like all parties do and these parameter will show up in random quantities.

drink (*substance_name*)

Drink an available substances specified in `VALID_DRINKS` constant

inventory ()

Display an inventory of guests and available drinks

put_hat_on_attendee ()

Put a hat on an attendee

`party.random_party` ()

Use this function to hold a completely party.

CHAPTER 2

Indices and tables

- `genindex`
- `modindex`
- `search`

p

party, 3

D

DontHaveThatDrink, 3

drink() (party.Party method), 3

E

EveryoneHasPartyHat, 3

I

inventory() (party.Party method), 3

O

OutOfThatDrink, 3

P

Party (class in party), 3

party (module), 3

put_hat_on_attendee() (party.Party method), 3

R

random_party() (in module party), 3
