# **that Documentation**

*Release 1.0.7*

**Daniel Greenfeld**

**Sep 27, 2017**

---

## Contents

---

<b>1</b>	<b>Installation</b>	<b>3</b>
<b>2</b>	<b>Usage</b>	<b>5</b>
<b>3</b>	<b>Contributing</b>	<b>7</b>
<b>4</b>	<b>Table of Contents</b>	<b>9</b>
<b>5</b>	<b>Indices and tables</b>	<b>11</b>

Warning: This is a joke. Don't use these bits unless you want to be hated.

Contents:

```
>>> import that
```

```
The Anti-Zen of Python, by Daniel Greenfeld
```

```
Ugly is better than beautiful.
```

```
Implicit is better than explicit.
```

```
Complicated is better than complex.
```

```
Complex is better than simple.
```

```
Nested is better than flat.
```

```
Dense is better than sparse.
```

```
Line code counts.
```

```
Special cases are special enough to break the rules.
```

```
Although purity beats practicality.
```

```
Errors should always pass silently.
```

```
Spelchek iz fur losers.
```

```
In the face of ambiguity, one guess is as good as another.
```

```
There should be many ways to do it.
```

```
Because only a tiny minority of us are Dutch.
```

```
Get things running, then fix them later.
```

```
If the implementation is hard to explain, it's enterprisey.
```

```
If the implementation is easy to explain, it won't take enough time to do.
```

```
Namespaces are too hard, just use "from module import *"!
```

# CHAPTER 1

---

## Installation

---

Installing from PyPI:

```
pip install that
```

Or if you want to try and play with the awesome source code:

```
git clone git@github.com:pydanny/that.git
```

## CHAPTER 2

---

### Usage

---

From the Python shell:

```
import that
```

Enjoy the wisdom!

## CHAPTER 3

---

### Contributing

---

Clearly, the code that generates *THAT* is too straightforward. If you can make it better, then do so. Just don't do anything like add tests or document the code.

### **Inspiration**

These are the people who have made this project possible (in order of appearance):

#### **Chris Shenton**

For re-introducing me to Python in the summer of 2005.

#### **Zed Shaw**

For helping me to remember never to take myself or this community that seriously.

#### **Jacob Kaplan-Moss**

For calling me up on beach vacation in the August of 2010 and telling me to fix my code.

#### **Audrey Roy**

For showing me daily how smart people do it.

#### **Raymond Hettinger**

For demonstrating to me that after 5 years of doing Python professionally I barely qualify for the basic class.

## Contributors

These are the people who make this all possible

### Project Lead

- Daniel Greenfeld

### Contributors

- Steve Holden

## CHAPTER 5

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
