# **Viewflow Extensions**

*Release 0.2.1*

June 30, 2016

<b>1</b>	<b>All Contents</b>	<b>3</b>
1.1	Installation . . . . .	3
1.2	Management Commands . . . . .	3
1.3	Sphinx . . . . .	4
1.4	Views . . . . .	4
<b>2</b>	<b>Indices and tables</b>	<b>7</b>
	<b>Python Module Index</b>	<b>9</b>

These are extensions for [Django Viewflow](#).

---

## All Contents

---

Contents:

### 1.1 Installation

Simply install the latest stable package using the command

```
pip install viewflow-extensions
```

and add 'viewflow\_extensions' to the INSTALLED\_APP setting in your settings.py, that's it!

### 1.2 Management Commands

#### 1.2.1 create\_graph

```
class viewflow_extensions.management.commands.flow_graph.Command(stdout=None,  
stderr=None,  
no_color=False)
```

Bases: django.core.management.base.BaseCommand

Create graphs from the path to flow class using graphviz.

Example usage:

```
usage: manage.py flow_graph [--svg] flow_path
```

Create graph for the given flow.

positional arguments:

```
flow_path           complete path to your flow, i.e. myapp.flows.Flow
```

optional arguments:

```
-s, --svg           create graph as svg file
```

---

**Note:** This extensions requires graphviz to be installed.

---

## 1.3 Sphinx

Sphinx extension to automatically render BPMN graphs of Flows.

Viewflow-Extensions comes with a Sphinx extensions that render BPMN graphs as SVG and automatically attaches them to the documentation of each flow.

To enable this feature simply add `viewflow_extensions.sphinx` to your Sphinx configuration.

Example:

```
extensions = [
    'sphinx.ext.autodoc',
    # ...
    'viewflow_extensions.sphinx',
]
```

---

**Note:** This extensions requires `graphviz` to be installed as well as the Sphinx extension `sphinx.ext.autodoc` to be enabled.

---

## 1.4 Views

Views for view nodes that add additional behavior.

### SavableViewActivationMixin

**class** `viewflow_extensions.views.SavableViewActivationMixin`

Bases: `object`

Add save option to `.viewflow.flow.ManagedViewActivation` activations.

Usage:

```
from viewflow.views import ProcessView

class MyCustomView(SavableViewMixin, ProcessView):
    pass
```

All you have to do is to add a new submit button with the name `_save` to your template.

Template example:

```
<button type="submit" name="_save">
    {% trans 'Save' %}
</button>
```

**save\_task**

Transition to save the task and return to `ASSIGNED` state.

**activation\_done** (\*args, \*\*kwargs)

Complete the activation or save only, depending on form submit.

**message\_complete** ()

Disable complete messages if the task was only saved.

**get\_success\_url** ()

Stay at the same page, if the task was only saved.

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`

## V

`viewflow_extensions`, 3

`viewflow_extensions.management.commands.flow_graph`,  
3

`viewflow_extensions.sphinx`, 4

`viewflow_extensions.views`, 4

## A

activation\_done() (viewflow\_extensions.views.SavableViewActivationMixin method), 4

## C

Command (class in viewflow\_extensions.management.commands.flow\_graph), 3

## G

get\_success\_url() (viewflow\_extensions.views.SavableViewActivationMixin method), 5

## M

message\_complete() (viewflow\_extensions.views.SavableViewActivationMixin method), 5

## S

SavableViewActivationMixin (class in viewflow\_extensions.views), 4

save\_task (viewflow\_extensions.views.SavableViewActivationMixin attribute), 4

## V

viewflow\_extensions (module), 1

viewflow\_extensions.management.commands.flow\_graph (module), 3

viewflow\_extensions.sphinx (module), 4

viewflow\_extensions.views (module), 4
